#### **EXECUTIVE SUMMARY**

#### The HCHV Programs

The Health Care for Homeless Veterans (HCHV) program is a coordinated set of Department of Veterans Affairs (VA) homeless services programs funded through the Strategic Healthcare Group for Mental Health Services in Veterans Health Administration (VHA) Headquarters. Although these efforts encompass a number of specialized programs, the core program involves: (1) outreach to serve severely mentally ill veterans who are not currently patients at VA medical centers; (2) linkage with services such as VA clinical programs, contracted residential treatment in community-based halfway houses, and supported housing arrangements in transitional or permanent apartments; and (3) treatment and rehabilitation provided directly by program staff.

This report is the fourteenth in a series concerning operation of the HCHV program and presents monitoring data for FY 2000. Previous reports have demonstrated that: (1) the HCHV program has been successfully implemented at 72 program sites nationally; (2) it is serving a severely ill, deeply impoverished, and multi-problem population; (3) it is successfully reaching out to underserved veterans in community settings; (4) program participation is associated with improvement in housing, health status, employment and other areas of social adjustment; (5) improvement is especially associated with completion of a residential treatment program, which is also the most costly component of the program.

During FY 2000, the HCHV program began a substantial expansion of services. Over 100 new clinical staff were added, and the program now operates at 134 sites across the country. Funds to contract for residential treatment of veterans with psychiatric or substance abuse problems increased by 74 percent, to almost \$22million.

#### **Monitoring the HCHV Programs**

The HCHV program is monitored by VA's Northeast Program Evaluation Center (NEPEC). NEPEC tracks the work of HCHV teams through assessment data collected at the time of screening, and discharge summaries conducted at the conclusion of residential treatment. A series of indicators has been selected as "critical monitors" of site performance because these indicators reflect goals that were either specified in the program's authorizing legislation or that have been given priority by the Strategic Healthcare Group for Mental Health Services. Generally, the average performance of all HCHV sites is used as the norm for evaluating the performance of each individual site. In addition, adjusted monitors for residential treatment outcomes are used. These monitors compare each site to that for which performance was at the median level, and adjust for patient characteristics that are related to the outcomes.

#### **HCHV Outreach and Residential Treatment**

During FY 2000, HCHV teams across the country conducted 32,729 initial clinical assessments of veterans. This represents a 11 percent increase relative to the number of assessments conducted in FY 99 (29,342). More than 97 percent of the veterans contacted in FY 2000 were male, and their average age was 47 years. Slightly less than one-half of the veterans assessed were African American. About 50 percent of these veterans served in the military during the Vietnam era. Nearly 70 percent of the veterans seen were living in shelters or in outdoor locations at the time of first contact, and 40 percent had been homeless for six months or more.

HCHV teams are successful in locating homeless veterans in need of services. Approximately 81 percent of veterans contacted had a serious psychiatric or substance abuse disorder, and 31 percent had both psychiatric and substance abuse disorders. Three quarters of these veterans had worked no days in the 30 days just prior to assessment; about two thirds had a monthly income of less than \$500.

HCHV programs treated 43,082 veterans in FY 2000; this represents a nine percent increase relative to the number treated in FY 99. National workload per clinical FTEE was difficult to calculate in FY 2000, as many staff were hired mid-year; however, the number of veterans treated per clinical FTEE at non-expansion sites was 174. The average number of visits per veteran dropped slightly from 4.6 in FY 99 to 4.2 in FY 2000.

The HCHV program supported 4,808 episodes of residential treatment in community-based halfway houses during FY 2000; the number of episodes of treatment increased by 11 percent over the number in FY 99. The overwhelming majority of the veterans placed in contract care during FY 2000 (89 percent) met all the appropriate criteria for residential treatment (homelessness, low income, and clinical need). Over 50 percent of the veterans discharged during FY 2000 were judged to have successfully completed residential treatment. Thirty-four percent had an apartment, room, or house at discharge, and 48 percent had part-time or full-time employment (including employment through the Veterans Industries program). Clinical gains were substantial: over two-thirds experienced improvement at the time of discharge. Monitoring of mental health outpatient encounters indicated that 67 percent of discharged veterans were followed up with some type of after-care services within 30 days of discharge. These outcomes of residential treatment are quite consistent with the pattern observed in previous years. Overall, the extensive data presented here demonstrate that this program continues to provide a wide range of effective services to homeless veterans.

Long-term studies of VA homeless programs suggest that gains in housing, income and clinical symptoms are maintained for several months following program participation. In a recent analysis, long-term outcomes (ranging from 8 to 12 months) from HCHV residential treatment, VA's Domiciliary Care for Homeless Veterans program (DCHV) and the Access to Community Care and Effective Services and Supports project (ACCESS) sponsored by the Department of Health and Human Services were compared. There was substantial improvement in all three programs relative to levels at program entry across several domains (including percentage of clients housed and improved on alcohol, drug and psychiatric problems). These studies show that: i) homeless persons derive benefits from services that persist long after program entry and ii) The

degree of improvement is similar across the three programs, effectively benchmarking VA homeless programs against similar non-VA programs.

#### The Grant and Per Diem Program

The Grant and Per Diem program is VHA's initiative to establish transitional housing and support services to homeless veterans through partnerships with community nonprofit and local government agencies. At the end of FY 2000, 64 grant-funded programs were providing housing to homeless veterans. During FY 2000, the program had 4,497 admissions and 3,869 discharges. Veterans entering the Grant and Per Diem program were demographically similar to those contacted by the HCHV program, and share the wide array of economic, medical, substance abuse and psychiatric problems that characterizes the larger program population. Information on health services received by female veterans prior to admission to this program indicate that approximately a third have not received health services such as a general health appraisal, OB/GYN exam or Pap smear. Over half have not received a mammogram. A majority of those female veterans who did receive such services obtained them through the VA.

The average length of stay in the Grant and Per Diem program is 91 days, although half the stays in the program are 46 days or less (due in part to a few large, high-turnover programs). Consistent with previous reports, the majority of discharges were not successful (veterans were discharged for rule violations, or left the program without staff consultation). Consequently, overall clinical improvement as well as housing and employment outcomes were low. Not surprisingly, outcomes were uniformly better for successful discharges relative to unsuccessful discharges. As the program continues to expand, a key task should be the development of ways to increase compliance with program rules and treatment goals.

#### **The Supported Housing Program**

The Supported Housing program provides case management services for veterans who are placed in community housing, which may be either transitional or permanent. Over 2,000 veterans were served during FY 2000. Demographically, they are very similar to the overall population of HCHV veterans. They have a very high rate of substance abuse and psychiatric disorders, and over one-third have been homeless for over six months.

Veterans in the Supported Housing program are housed in a variety of different types of housing, including special housing for formerly homeless veterans. Usually these arrangements are made available through VA's collaborations with other agencies working on behalf of homeless veterans, especially Veterans Service Organizations. These veterans paid an average rent of \$217 monthly. Approximately 45 percent of the veterans discharged from this program during FY 2000 had a mutually agreed-upon termination, and 53 percent were housed upon discharge. Over 40 percent were employed full-time, part-time or were in Veterans Industries programs at the time of discharge from Supported Housing.

#### The Housing and Urban Development – VA Supported Housing Program (HUD-VASH)

The HUD-VASH program was implemented in three phases between 1992 and 1995, culminating in 35 clinical case management teams. By the end of FY 2000, these teams had admitted 3,726 veterans, 39 percent of whom are still active in the program. Owing to rigorous screening criteria, virtually all HUD-VASH veterans are literally homeless and have a psychiatric or substance abuse disorder at intake. HUD-VASH case management is flexible and relatively intensive, with weekly contacts, especially early in a veteran's involvement with the program. This case management, coupled with Section 8 rental assistance from HUD, allows program veterans to achieve exceptional housing stability. Overall, more than two thirds of veterans who are admitted to the program are housed in community apartments within three months, and approximately 85 percent of those who achieve housing maintain it for a year or more. Other longitudinal monitoring data indicate that well over half of program veterans show improvement in their financial situation and living skills; over 40 percent improve their employment status. Additionally, almost two thirds improve on drug and alcohol problems, and over half improve on mental health problems. These levels of improvement stay roughly constant over the course of a three-year follow-up. Overall, the HUD-VASH program provides valuable permanent supported housing services to a particularly vulnerable group of homeless veterans.

#### ACKNOWLEDGMENTS

During the period covered by this report, the monitoring of the Health Care for Homeless Veterans programs proceeded under the guidance of Laurent Lehmann, MD, Chief Consultant, Mental Health Services Health Care Group and Gay Koerber, Associate Chief Consultant, Health Care for Homeless Veterans, Mental Health Services Health Care Group at VHA Central Office. Program administration is aided by Roger Casey, Brian Morton, Judy Lattimore, Theresa Hayes and Victor Harris. We are saddened by the loss of Robert Murphy, Budget Analyst at VACO, who died in April, 2001. Special thanks to Brian Morton for provision of cost and allocation data for this report under these difficult circumstances.

The preparation of this report was aided by the other members of the HCHV evaluation team: Shirley Joyner, Loretta Manware, Vera Ratliff, Sheila Mealia and Nicole Dimeo. Dennis Thompson, Jennifer Cahill, Bernice Zigler and Alex Ackles of NEPEC's Office of Information Systems provided data management assistance. Virginia Emond, Michael Reed, Patricia Crann, Linda Scelfo-Appio and Carol Defaranos provided administrative support.

The HCHV program would not be possible without the scores of clinicians who work tirelessly to help these homeless veterans at a time of immense adversity. We join with the rest of VHA and the veterans themselves to express appreciation for their dedication and perseverance in the battle against homelessness.

Wesley J. Kasprow, PhD,MPH Robert Rosenheck, MD Diane DiLella, MPH Russell Carter Leslie Cavallaro July 10, 2001 West Haven, CT

#### CHAPTER 1 INTRODUCTION

#### A. The Health Care for Homeless Veterans Programs

Since 1987, the Department of Veterans Affairs (VA) has addressed the problems of homelessness among veterans through a broad range of specialized programs operated through its for Mental Health Services Healthcare Group (MHSHG). These programs are collectively known as the Health Care for Homeless Veterans (HCHV) programs. The HCHV programs include: (1) the Homeless Chronically Mentally III (HCMI) program, established in 1987, which is the original program component; (2) the Department of Housing and Urban Development - Veterans Affairs Supported Housing (HUD-VASH) program, a partnership with HUD to pair intensive case management with Section 8 rental vouchers; (3) the Supported Housing initiative, which pairs VA's clinical case management resources with local collaborations with agencies and organizations; (4) day treatment programs, offering low-expectation environments, daytime respite from the elements and support in order to engage homeless veterans into treatment; and (5) Compensated Work Therapy (CWT) and Compensated Work Therapy/Transitional Residence (CWT/TR) programs specially funded to serve homeless veterans. CWT programs offer vocational rehabilitation through supervised work, which is contracted from private firms and public sector agencies. CWT/TR programs also offer stable living environments in shared housing in which the participants pay rent from their CWT incomes<sup>1</sup>.

#### **B. Program History**

The HCMI program was initiated in 1987, with the passage of PL 100-6. The \$5 million spending authorized by this law was to be used to support clinical teams to conduct outreach to homeless veterans, as well as to contract for time-limited residential treatment with community-based service providers. This legislation and subsequent appropriations made it possible to fund HCMI programs at 43 VA medical centers nationally. Although the HCHV programs have continued to expand and diversify in recent years, the HCMI program remains the core of these efforts.

In 1989, a panel of national experts was convened to review evaluation data and suggest future directions. This panel recognized the need to expand the range of services beyond health care and case management, to provide services that were longer term, more intensive, and more community-based. To that end, HCMI managers planned efforts to expand housing, financial support and rehabilitative dimensions of services offered in the HCMI program by establishing formal collaborations with the Veterans Benefits Administration; the Department of Housing and Urban Development; the Social Security Administration; VA's Compensated Work Therapy program; community non-profit organizations; and state and local governments. HCMI managers also developed the concept of Comprehensive Homeless Centers, which would provide a full range of services needed by homeless veterans.

The HCMI program and the HUD-VASH program exemplify the model of care which experts in homelessness have widely endorsed: service integration (Federal Task Force on

<sup>&</sup>lt;sup>1</sup> Monitoring data for CWT and CWT/TR programs are provided in separate evaluation reports.

Homelessness and Mental Illness, 1992). If one theme has dominated the development of the HCHV programs, it has been the increased involvement with community providers. By exchanging resources with other agencies, VA has been able to leverage additional resources for homeless veterans which would otherwise be inaccessible, or prohibitively expensive. In FY 93, VA supported the development of several community collaboration projects to serve homeless veterans. Several of these projects depend on the energy and generosity of Veterans Service Organizations, which undertake activities such as the development of free or low-cost housing.

The newest component of the HCHV programs, the Grant and Per Diem program also emphasizes the principle of community partnership. In 1992, the Homeless Veterans Comprehensive Services Programs Act was passed as Public Law 102-590. This established VA's Homeless Providers Grant and Per Diem Program and gave VA authority to award grants and per diem payments to grass-roots nonprofit organizations or state and local government agencies to assist homeless veterans. This program has provided start-up funds to a variety of nonprofit organizations and state/local government agencies to assist homeless veterans. From FY 94 through FY 2000, 186 grants were awarded to non-profit organizations or state/local government agencies in 44 states and the District of Columbia for the creation of transitional housing programs and service centers. Total funding to date has been \$52 million. When these projects are completed, more than 5,000 new community-based beds will be available for homeless veterans. In addition, during FY 2000, VA initiated a program to provide per diem payments (for up to three years) to community homeless service providers that had not received a start-up grant. These "per-diem only" programs will provide an additional 1,300 transitional housing beds for homeless veterans.

The development of these innovative programs would not have been possible without increased Congressional appropriations. In FYs 87 and 88, HCMI program expenditures totaled approximately \$11 million per year. By FY 92, expenditures had grown to about \$15 million. An additional \$10 million in recurring money was allocated for HCHV and Domiciliary Care for Homeless Veterans (DCHV) efforts during FY 93. HCHV funds were used to provide additional services at existing sites and to establish 12 new HCHV program sites. Several of these program expansions and new programs were special collaborative ventures with non-profit groups or state veterans agencies. In FY 2000, Congress provided funds for the largest expansion of the HCHV program to date, with a total of \$18.8M² newly dedicated for staff and contract residential treatment payments. Thus, as of the end of FY 2000, VA Central Office has funded 122 VAMCs for HCHV programs with contract residential treatment (i.e., HCMI programs) and an additional 12 HCHV programs with other housing arrangements. The distribution of HCHV programs as of 9/30/00 is shown in Table 1-1.

On October 1, 1995, the Veterans Health Administration (VHA) underwent a major reorganization into 22 semi-autonomous Veterans Integrated Service Networks (VISNs) (Kizer, 1995). The 22 VISNs are charged with developing cost-effective health care programs that are responsive both to the national mission of the VHA, and to local circumstances and trends in health care delivery. Although semi-autonomous, the VISNs are also accountable through centralized

.

<sup>&</sup>lt;sup>2</sup> An additional \$17M was provided by Congress to fund expansion of the Grant and Per Diem and CWT programs, as well as to start several specialty initiatives (the Homeless Women's Veterans Program, the Critical Time Intervention demonstration, the Therapeutic Employment, Placement and Support program and the Homeless Veterans Dental Initiative).

monitoring of performance and health care outcomes. This report offers information for program managers at the VISN level, as well as at the level of the local medical center. Table 1-1V displays the number of each type of HCHV program for each VISN.

#### C. Services Offered by the HCHV Program

The core of the HCHV program is the outreach component. The central goal of the HCHV program is to reduce homelessness among veterans by conducting outreach to those who are not currently receiving services and engage them in treatment and rehabilitative programs. HCHV teams usually include two or three Masters level clinicians, generally social workers or nurses, who receive administrative support from a part-time clerk. While the approach taken at each medical center is designed to fit into the particular community setting and to integrate with local services, the central activities of HCHV teams include:

- *Outreach* to identify veterans among homeless persons encountered in shelters, soup kitchens and other community locations;
- *Clinical assessments*, to determine the needs of each veteran seen by the team, and to give priority to those who are most vulnerable;
- *Referral* to medical and psychiatric inpatient and outpatient treatment and to social services and entitlement programs;
- Rehabilitation in community-based contracted residential treatment facilities (at HCMI sites), arranged and monitored by the HCMI clinician; or in any of the other HCHV components, such as supported housing, HUD-VASH, or CWT and CWT/TR; and
- *Follow-up case management*, to help veterans identify resources which will facilitate their community re-entry.

#### **D.** Evaluation of HCHV Programs

Since its inception, the work of the HCHV programs has been monitored by VA's Northeast Program Evaluation Center (NEPEC) in West Haven, CT. The goals of the evaluation are: (1) to describe the status and needs of homeless veterans; (2) to assure program accountability; (3) to assess program effectiveness; and (4) to identify ways of refining the clinical program. The evaluation of the HCHV program includes several components. The implementation component and the outcome component were conducted in previous years and are described in detail in earlier reports<sup>3</sup>. These initial evaluations demonstrated that the program reaches the intended population, appropriate services are delivered as planned and veterans treated in the program show improvements in housing status, social adjustment, and other clinical domains.

<sup>&</sup>lt;sup>3</sup> See Rosenheck et al., 1987; Rosenheck et al., 1988; Rosenheck et al., 1989; Rosenheck et al., 1991; Frisman et al., 1993; Frisman & Rosenheck, 1994; Frisman et al., 1995.

#### Benchmarking of Long-term Outcomes

Long-term studies of VA homeless programs and similar non-VA programs suggest that gains in housing, income and clinical symptoms are maintained for several months following program participation. Figure 1 shows long-term outcomes (ranging from 8 to 12 months) from HCHV residential treatment (Rosenheck, Frisman & Gallup, 1995), VA's Domiciliary Care for Homeless Veterans program (DCHV; Leda, Rosenheck, Corwel & Olsen, 1993) and the Access to Community Care and Effective Services and Supports project (ACCESS) sponsored by the Department of Health and Human Services (Rosenheck et al., in press)<sup>4</sup>. There is substantial improvement in all three programs across all domains relative to levels at program entry, and the degree of improvement is similar across the three programs. These studies show that homeless persons derive benefits from services that persist long after program entry. Moreover, this comparison serves to benchmark outcomes of VA homeless programs against their non-VA counterparts.

Since FY 95, the annual reports have focused on monitoring, which provides information about ongoing program operation. Data collection includes: (1) reports of staffing and staff vacancies; (2) measurement of the workload of HCHV clinicians (i.e., number of new cases and contacts); (3) analysis of clinicians' assessment of veterans at the time of intake, including demographic characteristics, length of homelessness, psychiatric and substance abuse problems, and plans for referral; and (4) analysis of residential treatment discharge summaries, which provide information on the contract expenditures for the veteran, as well the outcome of treatment; and (5) description of the workload, client population, and outcomes of the Supported Housing program. Results of these analyses for FY 2000, and selected multi-year trend data, are provided in this report. Also included in this report are selected analyses of the performance of specialized homeless programs as organized by VISNs, a summary of the transitional housing programs developed through the Grant and Per Diem initiative, and a summary of the HUD-VASH program, which offers HUD Section 8 permanent housing and intensive VA case management.

A number of indicators have been selected as "critical monitors" of site performance because they reflect goals that were either specified in the program's authorizing legislation or that have been given priority by the MHSHG in VHA Central Office. The following five objectives played a central role in the selection of critical monitors:

- 1. The HCHV program was established to serve homeless veterans who have severely limited resources and who suffer from severe psychiatric and substance abuse disorders.
- 2. A central goal of the program is to link homeless mentally ill veterans with health care and other services that will facilitate their exit from homelessness and improve their health status, living situation, employment potential and overall quality of life.
- 3. Primary emphasis should be placed on reaching out to underserved homeless veterans in community settings (e.g., shelters, soup kitchens, the streets, etc.).

.

<sup>&</sup>lt;sup>4</sup> The ACCESS project includes both veterans and non-veterans, but is similar to the HCHV and DCHV programs in its focus on the homeless seriously mentally ill.

- 4. Clinical services, and especially residential treatment and supported housing services, should be targeted to those in greatest need, although limited assistance and information may be provided to any homeless veteran encountered during outreach.
- Contract residential treatment services should be closely monitored by HCHV clinicians who
  continue their involvement with each veteran during the period of residential treatment.
  Residential treatment should not generally exceed six months, unless special clinical
  circumstances demand more extended treatment.

Critical monitors have been selected to address each of these objectives. For example, one of the critical monitors concerns the method by which contact with the veteran was initiated. Since an objective of the program is to contact veterans through community outreach, a large proportion of veterans seen by program staff are expected to be encountered through outreach efforts. Those sites at which the proportion of veterans contacted through outreach is more than one standard deviation below the average proportion for all HCHV sites are identified as outliers. A description of the critical monitors can be found at the end of Chapter 9.

The identification of a site as an outlier on a critical monitor is intended to inform the local program coordinator that the site is divergent from other sites with respect to the critical monitor. Often, this information will help the coordinator to take corrective action, in order to align the site more closely with the national program. However, sometimes there are reasons for the difference which are related to situations peculiar to a site, and which do not warrant correction. NEPEC and VHA Central Office staff are in frequent contact with sites to discuss outlier monitors and other aspects of program performance.

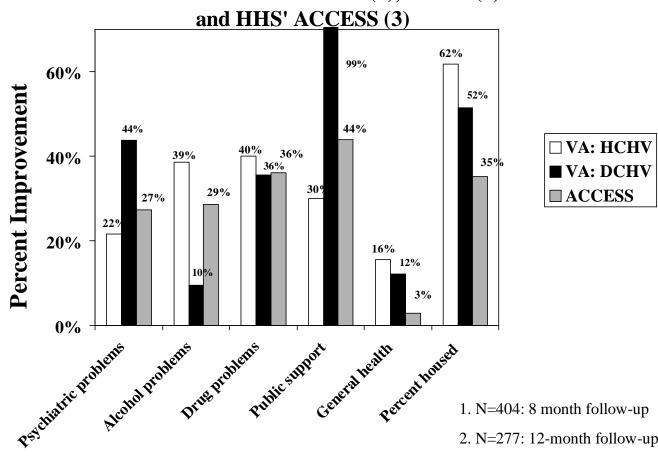

Figure 2 graphically displays the process of monitoring the HCHV programs. In addition to Annual Reports, HCHV sites receive information about program procedures and standards through the monthly national conference calls and subsequent conference call minutes. Each month NEPEC documents the number of staff members at each site, any staff vacancies, the number of completed intake assessments conducted on new veterans, and a residential treatment census for the month. On a quarterly basis, sites are given summaries of clinical assessment data submitted to NEPEC, residential treatment summaries and reports from the national outpatient care file, showing the workload for each site. Before the annual report is issued, preliminary data tables are distributed to medical center directors and HCHV staff at all sites. Program coordinators are encouraged to correct faulty data, and to submit additional data at each point of feedback. Outlier values are discussed and where appropriate, plans for modifying program procedures are developed. The data and analyses reported in the chapters that follow have been reviewed by the professional staff at participating medical centers, as well as by MHSHG staff in VHA Central Office, and data have been corrected or amended where appropriate.

#### E. Organization of this Report

The remainder of this report presents data on each HCHV monitoring area. Chapter 2 describes resources, which define the structure of the program at each site. Chapter 3 presents data on the characteristics of veterans assessed. Chapter 4 presents program process information, including data on the mode of contact and selection of veterans who were subsequently placed in

contracted residential treatment facilities. Chapter 5 presents data on veterans who were discharged from residential treatment during the fiscal year. Chapter 6 provides a summary of activity in the transitional housing programs funded through VA's Grant and Per Diem program. Chapter 7 presents monitoring information on the Supported Housing program. Chapter 8 presents data from the longitudinal monitoring of the HUD-VASH program. Chapter 9 describes the critical monitors in detail and summarizes critical monitor outliers and responses to these monitors.

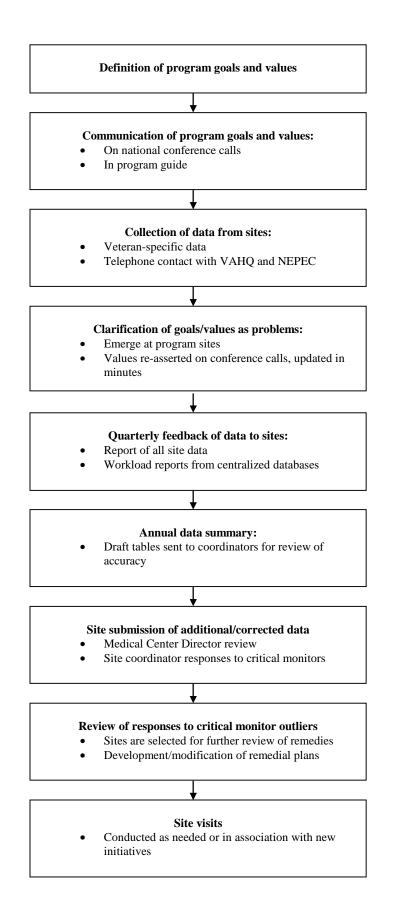

## Outcomes from VA's HCHV (1), DCHV (2)

## CHAPTER 2 MONITORING THE STRUCTURE OF HCHV PROGRAMS

HCHV program staffing and expenditures are monitored through monthly reports from program sites to NEPEC and VHA Central Office. Each monthly mailing to NEPEC includes a listing of the staff people who fill each of the positions allocated by Central Office for the HCHV program. VHA Central Office and NEPEC also track contracts with residential treatment facilities, and count workload as reported through VA's centralized database (the Outpatient Care File).

#### A. Program Expenditures and Staffing

During FY 2000, a total of \$53.4 million was spent on the HCHV programs nationally, excluding the HUD-VASH and homeless CWT/TR programs. (See Tables 2-1 and 2-1V.) The total consists of all expenditures from Personnel and All Other categories. These figures are based on expenditures reported by sites directly to VACO, and may be subject to under-reporting. The average site expenditure was \$404,642. HCHV expenditures support salary of staff, contracts with residential treatment providers, the cost of vehicles and pagers, and miscellaneous needs.

Reflecting the expansion of the HCHV program implemented in FY 2000, expenditures for program personnel during FY 2000 totaled \$28.3 million. Most of these staff are social workers. The remainder are generally nurses or Bachelor's level clinicians, such as social work associates. Additional staff resources are devoted to administrative tasks. Many programs have 0.2 to 0.5 full-time equivalent employees (FTEEs) for clerical tasks.

Tables 2-2 and 2-2V show the clinical staffing of HCHV programs as of September 30, 2000. (The table includes outreach clinicians and Supported Housing case managers; HUD-VASH, CWT and CWT/TR positions are not included). The number of allocated clinical staff positions nation-wide increased by approximately 100. The vast majority of these newly allocated positions were filled by the end of the fiscal year. Of the total number of positions allocated by VACO (approximately 341), approximately 42 are vacant or detailed away, leaving 82 percent of the allocated number actively working in the program. However, to compensate for these losses, several medical centers have detailed clinicians from other services to the HCHV program (called "donated" staff in the table). These donated positions almost completely fill the gap created by vacancies. Thus, the effective staffing level of the programs nationwide is about 98 percent. A station often opts to donate staff when vacancies cannot be filled due to center-wide hiring freezes. While reliance on donated staff is less preferable to having vacant positions permanently filled, it is this particular staffing strategy that has allowed the maintenance of services offered by the HCHV.

#### **B.** Contract Residential Treatment Costs

A large proportion of HCHV program expenditures is accounted for by contract costs, most of which are contracted residential treatment. In FY 2000, VACO allocated almost \$18 million for this purpose. Cost of residential treatment varies widely across sites for three reasons. First, the price of care at different facilities varies considerably. As shown in Table 2-3, the mean per diem

cost for these facilities was \$38.15 in FY 2000<sup>1</sup>. However, per diems ranged from approximately \$20 to almost \$80, and reflect geographic variation as well as variation in extent of services. Second, HCMI sites vary considerably on the quantity of contract beds available. Some sites do not have many appropriate facilities in the area. In these places, the HCMI program has focused less on residential treatment, and more on case management services. Finally, differences in expenditures are accounted for by variations in length of stay. Generally, the HCMI program offers short to moderate-term residential care. As shown in Table 2-4, the mean length of stay for the program was 59 days. Site averages ranged from less than one month to more than three months. Length of stay information is summarized at the VISN level in Table 2-4V.

Since FY 95, the annual number of episodes of residential treatment has increased steadily (about 23% over five years). Average length of stay has decreased during this time period, from 77 days in FY 95 to 59 days in FY 2000. Reductions in length of stay likely reflects attempts by sites to serve more veterans on a fixed allocation of residential treatment funds rather than any change in the clinical needs of the veterans served by the programs.

In Table 2-4, and on several tables that follow, sites that differ by more than a standard deviation from the site average are indicated with an asterisk<sup>2</sup>. Since the days per episode of residential treatment is also a critical monitor of program performance, the column is highlighted by a heavy border around it. This convention is used throughout this report for other critical monitors. Except for Table 5-12, which presents the results of multivariate analyses adjusted for potential influences on treatment outcomes, critical monitors are *unadjusted*. It is important, therefore, to avoid focusing on outlier values in isolation of other program characteristics. For example, Table 2-4 lists Boston as an outlier for length of stay in residential treatment. However, other report monitors show that all of the veterans placed in residential treatment there were appropriate (as measured by homeless status, presence of a psychiatric or substance abuse disorder and low income) and treatment outcomes in their program are generally at national averages. Thus, the longer length of stay may be a result of other (desirable) program characteristics.

In order to monitor the use of contract residential treatment funding, HCMI clinicians are directed to complete a form as each veteran is discharged. This form summarizes the veteran's stay in residential treatment. In Table 2-5, cost data from the Discharge from Residential Treatment form (DRT, or Form 5R), together with estimated costs for veterans still in care at the end of the fiscal year, are compared to the amount allocated from VHA Central Office for such treatment. The ratio presented in the last column of this table shows the proportion of costs which can be accounted for through the monitoring system. Where the ratio is less than 1.0, the site has not spent the entire allocation, has not submitted all discharge forms, or residential treatment funds are being used for some other purpose. There are some sites, such as Brooklyn and New York City, who use mostly unmonitored community care; therefore, almost <u>all</u> of their allocated funds are unaccounted for by this method. Similarly, FY 2000 expansion programs (and existing HCHV programs that received large increases in their residential treatment allocation) spent much of the year establishing contracts

\_

<sup>&</sup>lt;sup>1</sup> Per diem costs shown in Table 4 are calculated from total costs and days of care. Because programs may charge for a partial or full day based on time of admission and discharge, these costs are only approximately equivalent to prices.
<sup>2</sup> Because sites that were newly funded in FY 2000 may have been in operation for only part of the year, they are not included in the site averages or standard deviations of most data tables. For the same reason, outlier values were not calculated for these sites.

with residential treatment providers, and therefore spent a small fraction of their allocation. Thus, the relatively low average ratio in Table 2-5 (0.72) reflects delays associated with program implementation.

#### C. Workload

Tables 2-6 and 2-6V present workload data for the HCHV program in FYs 99 and 00. VA's outpatient workload is recorded through a system of DSS Identifiers (formerly known as "stop codes"), which are entered whenever an outpatient receives services. As shown in this table, the number of visits decreased from 182,814 to 180,712 while the number of veterans treated increased from 39,498 to 43,082. Thus, the visits per clinician over this two-year period declined slightly as did the average number of visits per veteran in the program. The average number of visits per veteran has declined each year since FY 95 (from 6.6 in FY 95 to 4.2 in FY 2000). It should be noted that these data only capture outpatient care offered by HCHV clinicians to these veterans. Where homeless veterans received other outpatient services from VA medical centers, those services were reported under different DSS Identifiers.

Tables 2-7 and 2-7V present another measure of workload for HCHV clinicians: the number of intake assessments conducted. When a clinician on the HCHV team initially assesses a veteran's appropriateness for the program, a HCHV Contact Form (Form X) is completed. Table 2-7 shows the trend in intakes done from FY 96 through FY 2000. Over this time period, number of intake assessments have increased 29 percent, from 25,436 to 32,729. This increase represents the effect of increases in number of program sites, increases in staffing at each program site, and increased need for services. From FY 99 to FY 2000, the number of veterans contacted by HCHV programs increased by approximately 11 percent (29,342 to 32,729), and number of assessments per clinician decreased slightly (154 to 133). These findings are reflective of the partial implementation of new and expanded programs; many staff were hired mid-year in FY 2000.

Table 2-8 compares information from the two previous tables to check the proportion of veterans served by HCHV clinicians who were assessed at intake. Clinicians report that the major reasons for not conducting an intake assessment are that the veteran is fearful or distrustful, or the clinician does not plan to offer extensive services to the veteran. Overall, 15,536 unique veterans (36 percent of the veterans in the Outpatient Care file) received services from the HCHV team without receiving a formal assessment. This number is higher than observed in previous years. However, these veterans received a mean of only 2.6 visits during the year, compared to the mean of 5.1 visits for veterans who had been assessed. Thus, about 23 percent of the work of HCHV clinicians is not represented in the tables that follow. The reasons for the increase in the percentage of veterans without an assessment on file are not clear. There are both new programs and long-established programs with high percentages on this measure. Overall, the data reported here are likely very representative of the HCHV population; however, at the program sites where the percentage of visits on veterans with no intake form is high, data are likely to be somewhat less indicative of the work completed.

<sup>\*</sup>EXCEEDS ONE STANDARD DEVIATION FROM THE MEAN

<sup>(1)</sup> Staff positions represent FTEE awarded to sites, and may have been vacant for part of the FY.

<sup>(2)</sup> CLIN columns exclude non-outreach clinicians (e.g., supported housing).

† Sites newly funded in FY 2000 are not included in the calculation of site average or site standard deviation nor are outlying values indicated.

# CHAPTER 3 VETERANS CONTACTED THROUGH THE HCHV PROGRAM

In this chapter, we present information concerning the veterans assessed by HCHV clinicians. Much of the data presented here is offered for its value in describing the veterans served with respect to their demographic characteristics. More importantly, program sites are monitored to check that they are seeing a truly needy population.

## A. Demographic Characteristics

Table 3-1 presents national trend data regarding the demographic characteristics of veterans who were clinically assessed for the HCHV program from FY 96 to FY 2000. Many of these characteristics are very similar from year to year. Approximately three percent of veterans contacted are women. The mean age of veterans assessed by HCHV clinicians has increased gradually from 44 in FY 96 to 47 in FY 2000. Veterans who served in the military during the Vietnam War consistently comprise the largest group of veterans screened. Marital status of HCHV veterans has been similar throughout this time period, with most veterans reporting that they are divorced or separated (58 percent in FY 2000); very few veterans (6 percent) are married.

In view of the aging of the veteran population, it is not surprising that the composition of the population with respect to military service era has changed over the last five years; an increasing proportion served in the Post-Vietnam era, with just under 5 percent listing service in the Persian Gulf era. Slightly less than one-fourth of HCHV veterans report combat duty, about the same proportion as in the general population of veterans (National Center for Veteran Analysis and Statistics, 1995).

African Americans continue to be over-represented in the homeless veteran population relative to the general veteran population. The largest increase in the proportion of African American homeless veterans occurred between FY 90 and FY 93. Since then, the percentage of HCHV veterans who are African American has decreased somewhat; between FY 96 and FY 2000 the percentage decreased from 50 percent to 47.

Existing trends with respect to work behavior also are quite stabile. The majority of HCHV veterans report their employment patterns as working part-time or irregular jobs, or not working at all. The proportion of HCHV veterans receiving public support has declined by about six percent since FY 96.

Site-specific data on age, gender and race of veterans seen at intake during FY 2000 are presented in Table 3-2. Differences between sites on these characteristics generally reflect the varying composition of the homeless population in each city; additionally, some program sites may make particular efforts to outreach to special populations, such as the elderly and/or women.

### **B.** Homelessness

Over two thirds of the veterans assessed for the HCHV program in FY 2000 were literally homeless (i.e., living in a shelter or outdoors). As shown in Tables 3-3 and 3-3V, some programs also see a substantial number of veterans who are temporarily living with others. As expected, very few veterans have their own apartment, room or house. Program sites with a high proportion of veterans assessed who were not literally homeless are identified as outliers. Program site performance is also judged by the number of intake assessments performed on veterans who are literally homeless. This indicator is one of the major performance indicators for the program sites. As shown, 110 literally homeless veterans were screened per clinical FTEE in the program as a whole, which is similar to the number seen in previous years. Low values on this measure generally reflect either a low rate of total assessments by the program site, or a population which is somewhat more domiciled (e.g., living with family members, rather than public shelters). In FY 2000 considerable variability on this measure resulted in the identification of few outliers.

More specific information on where veterans slept during the past 30 days is shown in Table 3-4. The column listing mean days literally homeless includes days spent in shelters, on the street, in automobiles, and in abandoned buildings. The highest number of average days were spent in these locations. The column listing mean days institutionalized includes days spent in hospitals, medical detoxification centers, halfway houses, and jails. Days housed includes days spent in one's own home, or in the homes of family and friends.

Tables 3-5 and 3-5V display data on the length of the current episode of homelessness. During intake assessments, clinicians ask veterans how long it has been since they had a regular place to live for at least 30 days, and then subtract time spent in institutions. About one-third of the veterans seen in FY 2000 fall in the modal category, one to six months. Sites with a high proportion of veterans who have not spent any time homeless are identified as critical monitor outliers. Overall, about eight percent of veterans assessed in FY 2000 had spent no time homeless prior to intake.

In Table 3-6, trend data on two indicators of homelessness, percent not strictly homeless and percent homeless less than one month, are shown. There is considerable similarity on these indicators over the five-year time period. Between FY 99 and FY 2000, the percentage of veterans not strictly homeless increased by 3 percentage points; the percentage homeless less than one month increased by one percentage point.

### C. Clinical Status

In Tables 3-7 and 3-7V, the clinical status of HCHV veterans at intake is shown. Diagnoses shown represent the impressions of HCHV clinicians during the intake assessment; thus they are preliminary and must be viewed in that light. The medical problems are those reported by the veteran in response to the question, "Do you feel you have any serious medical problems?".

In FY 2000, the majority of veterans seen (82 percent) were judged to have a serious psychiatric or substance abuse problem. Close to one-half (44 percent) had a serious psychiatric problem (i.e., psychosis, mood disorder, or Post-traumatic Stress Disorder). Over two thirds (69

percent) were described as dependent on alcohol and/or drugs. About one-third (32 percent) were dually diagnosed with serious psychiatric problems and a substance abuse disorder. As shown in Tables 3-8 and 3-8V, the rate of serious psychiatric or substance abuse disorder has decreased only slightly during the past five years of the HCHV program. These high rates of mental disorder reflect the adherence of the program to the objective of serving homeless veterans with serious psychiatric and substance abuse problems, as well as the high rate of problems among the homeless.

#### CHAPTER 4 HCHV PROGRAM PROCESS

#### A. Focus on Outreach

The HCHV program is primarily an outreach program that serves veterans who do not come to the VA medical center on their own. In Tables 4-1 and 4-1V, data on the mode of first contact are shown. Two types of VA-initiated outreach are identified. In FY 2000, 57 percent of the veterans seen at intake were first contacted through VA outreach efforts in places like community shelters and soup kitchens. Another 14 percent were seen in special programs where the VA clinicians collaborate with another agency serving homeless veterans, or where VA operates a day center away from the VA medical center. In FY 2000, stand downs contributed appreciably to this category. Combined, these two types of VA outreach accounted for 71 percent of the first contacts by HCHV clinicians. An additional 7 percent were referred to VA through the outreach efforts of other community agencies. Collectively, these data illustrate the program's continued focus on community outreach.

As shown in Tables 4-2 and 4-2V, veterans are frequently interviewed for the intake assessment in the community. In FY 2000, about 76 percent were interviewed in community locations. (Many of those in the "other" category are also likely to be community settings.) Less than 20 percent of veterans are formally assessed at the VA medical center, although this varies widely across sites.

Tables 4-3 and 4-3V show the trend in outreach and community interviews from FY 96 through FY 2000. In these tables, however, we combine outreach done by VA clinicians and by other agencies. There was a two percentage point decrease in the proportion of veterans encountered through outreach, and a four percentage point decrease in proportion interviewed in the community, from FY 99 to FY 2000; yet current levels of outreach activity are higher than the earliest year shown in the table, FY 96.

Tables 4-4 and 4-4V show the use of HCHV services by veterans who were assessed by the HCHV program during FY 2000. Service use was summarized for the six months prior to assessment and the six months following assessment. Tables 4-4A and 4-4AV display the use of any VA mental health services by the same group of veterans<sup>1</sup>. Each table lists the percentage of veterans in four service-use groups (none before-none after; some before-none after; none before-some after; some before-some after). Tables 4-4 and 4-4V show that most veterans assessed by the HCHV program (80 percent) have not used HCHV services in the six months before contact. Overall, about half the veterans receive HCHV services in the six months following initial contact. A key group for documenting HCHV outreach efforts is those veterans who did not use services before contact and did use them after contact. This group constitutes about 36 percent of the contacts made during the time period under study. About 44 percent of contacts during the time

<sup>&</sup>lt;sup>1</sup> Because the measurement of service use extended six months beyond the assessment date, only veterans assessed during the first three quarters of FY 2000 are included. VA Mental health service use included any outpatient psychiatry, outpatient substance abuse, HCHV case management, vocational rehabilitation, domiciliary aftercare, admission to a psychiatric rehabilitation residential treatment program (PRRTP) or admission to a Compensated Work Therapy Transitional Residence (CWT/TR).

period measured used no HCHV services before or after initial assessment. This group includes non-eligible veterans, veterans whose Social Security numbers were recorded incorrectly on the assessment form, and veterans who were referred directly to non-HCHV services following assessment.

The broader use of VA mental health services in the group initially assessed during FY 2000 is shown in Tables 4-4A and 4-4AV. About 47 percent of these outreach contacts have used some VA mental health services in the six months before contact (this percentage is quite similar to the veterans self report of service use in the six months before contact). Overall, about 67 percent of the veterans contacted in FY 2000 receive some services from VA mental health in the six months following contact. Only about a quarter of veterans contacted get no services before or after contact. The difference between the 44 percent who receive no HCHV services before or after contact (in Table 4-4) and the 27 percent who receive no VA mental health services before or after contact (in Table 4-4A) shows the direct referral of veterans from the outreach contact to mental health services with no intervening HCHV treatment.

#### **B.** Selection for Residential Treatment

Tables 4-5 through 4-11 compare veterans contacted in FY 2000 who were placed in residential treatment with those not placed. (Only sites with contract residential treatment programs are included in these tables). Of the 26,215 veterans on whom intake assessments were completed during FY 2000 at sites with residential treatment programs, 4,029 (13 percent) were placed in contracted residential treatment<sup>2</sup>. Because of the scarcity of contract funds, it is important for each HCHV program site to select the best candidates for treatment. Clinicians must weigh the need for treatment (e.g., chronicity of homelessness, vulnerability, or clinical problems) against the veteran's ability to make the best use of resources. The measures in Tables 4-5 through 4-11 attempt to monitor this process.

Veterans placed in residential treatment were slightly younger than those not placed (see Table 4-6). A lower percentage of women were placed in residential treatment as were not placed. The ethnic distribution of placements was similar to those not placed (Table 4-7).

As shown in Table 4-8, veterans who were placed were as likely to be literally homeless at intake as those not placed. Also, HCHV clinicians select for residential treatment those veterans who have the most serious psychiatric and substance abuse problems, as indicated by their intake diagnoses (Table 4-9).

Appropriateness of Residential Treatment Placement

In order to detect inappropriate selection for placement in residential treatment, three indicators were selected. Veterans who met any of these criteria at intake were considered possibly inappropriate: (1) having more than \$1,000 monthly income; (2) living in their own apartment, room or house; or (3) having no psychiatric or substance abuse disorder. As shown in Tables 4-10 and 4-10V, 11 percent of veterans placed in residential treatment during FY 2000 met any of these

<sup>&</sup>lt;sup>2</sup> Placement figures in Table 4-5 include only veterans whose intake form was completed during FY 2000 and whose admission to residential treatment occurred prior to January, 2001.

criteria, although there is considerable variability across sites on this measure. The percentage of inappropriate placements to residential treatment has crept upward in recent years, from 8.5 percent in FY 97 to 11.0 percent in FY 2000. Several comments must be made with respect to inappropriateness indicators. First, these measures are only intended to indicate the need to review cases more carefully, and not as a definitive statement that a placement was made in error. Second, both income and housing is judged during the first assessment of the veteran, and the veteran's status may have changed before placement. Finally, clinical judgment must occasionally outweigh other considerations. For example, a psychotic veteran who is about to be evicted may be appropriate for placement, even if he has been in his home until the day of the assessment.

As stated above, an important principle of the HCHV program is its focus on outreach. Contract residential treatment dollars are not intended to be used for veterans who are referred from inpatient units of the medical center. In order to detect these placements, the Social Security numbers of veterans who were placed in residential treatment in FY 2000 were matched with VA's centralized database on inpatient care, the Patient Treatment File. Veterans who had been in the hospital on the day prior to the intake were identified. The results are shown in Tables 4-11 and 4-11V. Overall, five percent of veterans had been inpatients on the day prior to intake. In some cases, these veterans had been discharged and seen the following day in a shelter; in other cases, the veteran had actually been seen in a community location, but the assessment was not completed until after admission to the hospital. While neither of these situations is fully consistent with program policy, the most serious deviation from stated program policy is the use of resources for discharge planning. Although the percentage of veterans in the hospital on the day before intake is appreciable at a small number of sites, overall it does not appear that HCHV resources are being eroded by use for inpatient discharge planning.

#### **CHAPTER 5**

#### TREATMENT OUTCOMES

## A. Successful Completion of Residential Treatment

Tables in this chapter report data concerning veterans' progress in residential treatment. All discharges from care during the fiscal year are counted. (The number of discharges does not represent unique individuals; some veterans are re-admitted within the same year.) In Table 5-1, the percentage of successful completion of the program (i.e. completion of a mutually agreed-upon discharge plan) is reported. Overall, 52 percent of discharges were classified successful. Veterans who did not successfully complete treatment typically left the facility before staff felt it was advisable, or were asked to leave because of rule violations. The "other" category includes many veterans who were transferred to another facility, or who obtained employment and decided to stay in the half-way house and pay for their own care. These veterans are considered "discharged" for the purposes of monitoring, because VA no longer funds their treatment.

Table 5-2 lists characteristics and outcomes of successful discharges and unsuccessful discharges from residential treatment separately. Veterans who successfully complete treatment are very similar to unsuccessfully discharged veterans with respect to problems at intake. Over 80 percent have alcohol problems; more than two-thirds have drug problems. About one-half have psychiatric disorders. Yet the difference in outcomes for those veterans who stay in treatment is striking: almost all of the successful completers have improved with respect to the clinical problems exhibited on admission. For example, over 97 percent of veterans admitted with an alcohol problem have made improvements in this domain. About 46 percent of successful completers have independent housing, versus 22 percent of unsuccessful discharges (34 percent overall). Approximately 18 percent of successful discharges are unemployed, compared to 29 percent of unsuccessful discharges. The majority of unsuccessful discharges are due to the veteran leaving the program without consultation; therefore outcome status is unknown.

## B. Trends in Outcomes, FY 96 - FY 2000

Table 5-3 reports trends in the outcomes of HCHV residential treatment, from FY 96 to FY 2000. This table conveys stability in outcomes characteristic of a mature treatment program. The proportion of veterans admitted with alcohol, drug, mental health or social/vocational problems remained level in FY 2000. The percentage of veterans who were judged to have successfully completed the program, which had increased steadily between FY 94 and FY 97, remained steady again in FY 2000. Employment and housing outcomes are generally similar each year, although there has been a gradual reduction in the percentage of veterans who are discharged to independent housing with a concurrent increase in the percentage who are discharged to further treatment in a halfway house or other institutional setting. Overall, the program has considerable success in improving the lot of extremely disadvantaged and disabled veterans.

### C. Situation at Discharge

Tables 5-4 and 5-5 report site-specific information on veterans' status at discharge, including housing, with whom the veteran was living, and employment. Table 5-4 reports living situation. Having one's own apartment, room or house represents the most favorable outcome. Approximately 34 percent of veterans achieve this outcome. Approximately 37 percent of veterans are discharged to a halfway house or other institutional setting. Many of these veterans stay on in the same residential treatment facility, but pay for their own care<sup>1</sup>.

In Table 5-5, the employment outcomes of discharges are displayed. Overall, approximately 38 percent of discharges have either full or part-time employment. An additional 10 percent of the veterans participate in Veterans' Industries programs.

## D. Clinical Status and Follow-up Treatment

Tables 5-6 through 5-11 show the outcome of residential treatment with respect to clinical problems exhibited at admission. Even for veterans who do not successfully complete the program, there are often improvements in substance abuse, mental health, medical or social-vocational problems. At least 60 percent of veterans with each type of problem show some improvement at discharge.

These tables also reveal follow-up treatment planning for each problem area. Most veterans are discharged with some follow-up plan. The lowest follow-up rates are for social-vocational problems, which presumably reflects the health orientation of the host VA medical center; i.e., fewer social and vocational services are available. Follow-up planning for substance abuse and psychiatric problems occurs for approximately 80 percent of veterans discharged. Although sites are encouraged to provide follow-up care for veterans leaving residential treatment, some of the veterans are judged not to need further services, and some refuse follow-up care. Tables 5-9 and 5-9V compare planned follow-up at discharge with actual follow-up received within 30 days of discharge<sup>2</sup>. Although the discrepancy between planned and actual follow up is quite large at some sites, overall 67 percent of veterans discharged receive some follow up treatment.

While Tables 5-5 through 5-11 reveal important information regarding the outcome of care for veterans in each program site's contracted residential treatment, these tables do not control for differences in demographics and presenting conditions that can influence treatment outcomes. A program site identified as an outlier on outcome monitors may be doing a good job--if the mix of patients placed in treatment was more difficult than the case mix at other program sites. For that reason, risk adjusted monitors are presented in Tables 5-12 and 5-12V. These tables show the results of seven multivariate regression models that control for variables significantly related to each outcome. These variables are not shown in Table 5-12, but they include age; gender; race; combat

\_

<sup>&</sup>lt;sup>1</sup> A procedure for capturing outcomes of such "continuing episodes of care" was instituted in FY 2000; however, there was an insufficient number of these episodes to summarize in this report.

<sup>&</sup>lt;sup>2</sup> Actual follow up is defined as at least one mental health or psychosocial rehabilitation outpatient encounter (500-series DSS identifier), domiciliary aftercare visit, vocational rehabilitation outpatient encounter or an admission to a Compensated Work Therapy Transitional Residence (CWT/TR) or Psychiatric Residential Rehabilitation Treatment Program (PRRTP) within 30 days of residential treatment discharge.

experience; whether the veteran was usually employed in the three years preceding intake; income; receipt of public support; and severity of alcohol, drug and mental health symptoms. These variables were included in each model based on significant correlations with the outcome variable in question. The percents shown in Table 5-12 represent the difference between the program site and the site with the median performance with regard to the outcome variable. For example, veterans in Greater Los Angeles were about eight percent more likely than veterans at the median site (Cheyenne) to successfully complete the program. Veterans in the East Orange program were 12 percent less likely to successfully complete treatment. The last column in Table 5-12 presents a summary Z-score, which averages the Z-scores for the preceding columns. Scores for Domiciled at Discharge and Housed at Discharged are averaged together first, to avoid increasing the weight of the housing outcome. The value of the summary Z statistic indicates overall program performance.

### E. Discussion

Many of the outcomes reported on these tables are related to three important factors in the nature of the program at the site. First, the number of veterans placed in treatment varies among the sites, and affects these outcomes. A low number, for example, may mean that the program site has placed less emphasis on residential treatment as a resource for addressing the problems of veterans seen; a very high number may affect the amount of time which can be devoted to each veteran. Second, the quality of the contract residential treatment providers may vary considerably, and these outcome measures reflect these providers' services, as well as those of the HCHV team. Finally, some differences are related to the case mix of the population placed in residential treatment. Although the results in Table 5-12 are adjusted for case mix, such statistical adjustment techniques cannot completely control for population differences.

# BLANK

#### **CHAPTER 6**

#### THE GRANT AND PER DIEM PROGRAM

# A. Background

The Homeless Providers Grant and Per Diem program was authorized by Public Laws 102-590 and 104-110 to establish alternative housing programs for homeless veterans through partnerships with non-profit or local government agencies. Since FY 94, VHA has awarded over \$52 million (186 grants) to support construction and renovation of program facilities, as well as the payment of per diem support to partner agencies<sup>1</sup>. Many of these programs are still in planning and construction phases of development; however, when completed they will provide approximately 5,000 community beds for homeless veterans. The current report provides evaluation information on 64 programs that were operational in FY 2000<sup>2</sup>.

### **B.** Program Description

Funding provided by the Grant and Per Diem (GPD) program allows more flexibility in the design of services than say, HCHV contract residential treatment. For the majority of GPD programs, the principal mission is to provide temporary housing in support of the transition to permanent housing. Veterans may spend time there following residential treatment in an HCHV contract facility. However, programs with alternate missions have been funded. For example, Louisville's housing program is intended largely for veterans who are *awaiting placement into* HCHV residential treatment. Therefore, veterans in this program are at an earlier phase of their course of treatment than in other programs. A program in Leominster, Massachusetts (Veterans Hospice Homestead) was funded specifically to provide housing to homeless veterans who are terminally ill. Thus, the GPD represents a heterogeneous group of programs that have the common goal of providing flexible housing and support services.

### C. Monitoring

Although the missions of the programs differ somewhat, the monitoring of the GPD program is modeled after the evaluation of HCHV residential treatment. Every veteran who is admitted into the GPD program has an intake assessment completed by the HCHV team or by the VA Liaison. The intake assessment provides baseline data on veterans referred to this program. Clinicians in the GPD program complete a discharge report at termination. These reports describe basic characteristics of the stay in GPD including cost, as well as several outcomes of program participation such as employment status, housing status, and clinical improvement. Because the GPD is still in the implementation phase, no critical monitors of program performance have been established.

\_

<sup>&</sup>lt;sup>1</sup> VHA generally pays a maximum per diem of 50 percent of daily operating costs, up to a limit of \$19 per day. GPD programs must have a treatment population of at least 75 percent veterans.

<sup>&</sup>lt;sup>2</sup> Per diem payments to service providers not originally funded through the VA Grants and Per Diem program (so-called "per diem only" programs were initiated during FY 2000; however there were too few admissions to these programs to include in this report.

### **D.** Program Structure

As shown in Table 6-1, GPD programs provided 2,020 transitional housing beds in FY 2000. The programs admitted almost 4,500 veterans and had over 3,800 discharges. There are no VA staff specifically assigned to the GPD program. Rather, the GPD program is a housing resource for many of the veterans who receive case management through the HCHV program or through medical center homeless services (at medical centers who do not have HCHV programs). Table 6-2 shows VA outpatient visits for homeless services (i.e., DSS identifier 529 for HCHV services and 590 for non-HCHV services) received by veterans enrolled in the GPD program. About 70 percent of veterans in GPD program see VA homeless program case managers while in the program, with an average of seven visits per veteran. The remaining 30 percent may receive their case management from the non-VA GPD program provider. It should also be recognized that VA clinicians may not report all of their work with GPD veterans using these two DSS identifiers.

#### E. Patient Characteristics

Table 6-3 presents several characteristics of GPD veterans at time of intake<sup>3</sup>. Most GPD programs operate at medical centers with HCHV programs, and the HCHV serves as the main referral source for GPD. Previous reports show that the characteristics of the GPD population are very similar to the larger HCHV population (see Table 3-1). The mean age of veterans in the GPD program is 46 years. Most veterans in the program (97 percent) are men. Almost half (56 percent) are African American, and most are either divorced (43 percent) or separated (17 percent).

With respect to report of three-year employment patterns at the time of outreach, approximately a third of the veterans said they were usually working full-time, and about a quarter were working part-time. This is slightly higher than seen in the larger HCHV. Yet, in the 30 days just before the intake assessment, the mean days worked by GPD veterans were only four, and over 70 percent earned less than \$500 in the 30 days prior to intake.

The GPD intake assessments collect information about the veteran's family situation at the time of intake. The information reinforces the separation from family that is characteristic of homeless males. About 94 percent of the veterans at intake were living alone. Less than five percent of veterans report that their families are participating in treatment with them. While about 33 percent of veterans at intake have children under the age of 18, less than one percent report children living with them.

As shown in Table 6-4, veterans in the GPD program report serious medical problems at intake. Oral / dental (33 percent) and orthopedic problems (31 percent) are the most common. Hypertension affects almost a fifth of GPD veterans and quite serious health disorders such as heart and pulmonary problems are reported. Over 65 percent are judged by the interviewing clinician to need medical treatment, which is comparable to the general HCHV population.

-

<sup>&</sup>lt;sup>3</sup> Intake information is collected at the time of initial contact with VA homeless services. While some veterans make first contact through the GPD program, the majority initially make contact through HCHV outreach. On average, intake information is collected about 80 days before the admission to the GPD program.

Intake clinicians make preliminary diagnoses concerning substance abuse and psychiatric problems. Site variation in psychiatric and substance abuse problems is shown in Table 6-5. The majority of GPD clients (66 percent) are diagnosed with alcohol abuse or dependency; 57 percent are diagnosed with drug dependency. With respect to serious mental illness, 38 percent were assigned a diagnosis of a serious psychiatric problem (includes mood disorder, schizophrenia, other psychotic disorder or PTSD). Overall, almost 90 percent of the GPD veterans were deemed to have a serious psychiatric disorder or a substance abuse problem. About 30 percent were assigned concomitant psychiatric and substance abuse disorders. These characteristics are largely representative of the larger HCHV group from which most GPD veterans are drawn, with substance abuse disorders slightly higher in the GPD population.

The homelessness at intake of the veterans in the program is displayed in Table 6-6. Although a small percent have become homeless only recently or are only at risk of homelessness, a considerable portion (38 percent) had been homeless for six months or more at the time of intake. On average, 14 days of the 30 days just prior to intake were spent homeless. As shown in Table 6-7, somewhat less than a third of the veterans in the program are encountered through outreach efforts; this percentage has decreased in each of the last two years, down from 56 percent in FY 98 to 31 percent in FY 2000. The percentage of veterans who are "self referred" to the GPD program has doubled since FY 98 (from 12 percent to 24 percent).

## F. Length of Stay and Cost

Table 6-8 characterizes the 3,817 discharges from GPD with respect to length of stay and cost. The average length of stay overall is about 91 days; however there is considerable variability across sites. This is to be expected, as the mission of the programs are not identical. Because of this variability, the median length of stay is also presented. This shows that 50 percent of the veterans in GPD stay 46 days or less, with the shortest median stays occurring at Cross Roads in Cleveland (9.5 days) and New Directions in Greater Los Angeles (14 days). In contrast, there are nine programs that have median lengths of stay over six months. Virtually all of the programs receive the maximum per diem payment from the VA (in FY 2000, \$19). The average cost to VHA per episode in the GPD program was \$1,559 (median: \$760). Table 6-8 includes the number of veterans who had a stay more than two years, which is the maximum stay as specified in program regulations. Very few veterans (13) have exceeded this maximum; those that have are at the older programs.

#### **G.** Treatment Outcomes

Tables 6-9 through 6-13 describe the information reported at discharge from the GPD program. Table 6-9 shows that there is a relatively low percentage of "successful" discharges (defined as those where the veteran has actively participated in accordance with treatment goals). In the majority of cases (55 percent), veterans were discharged due to program rule violations, or the veteran left the program without consult. This has been a relatively consistent finding since the first summary of the GPD program was reported (FY 98). As in previous years, the national average is influence by several large programs; there is also a great deal of variability across programs, with the percentage of successful discharges ranging from 0-80 across programs.

The relationship between successful completion and treatment outcome measures is shown in Table 6-10. As noted previously, most veterans in the GPD have substance abuse or psychiatric problems; a slightly lower percentage of veterans who were admitted with substance abuse problems were discharged successfully. Overall, about 30 percent of GPD veterans are employed full time when they are discharged. About 30 percent are housed at discharge; another 26 percent go on to another form of treatment program. (Housing and employment outcomes by program are listed in Tables 6-11 and 6-12). Somewhat less than half of GPD veterans are rated as improving clinically at discharge, and almost three quarters have some sort of follow-up plan at discharge. (clinical improvement outcomes by program are listed in Table 6-13). These percentages are fairly low and certainly related to the high percentage of veterans who leave GPD programs involuntarily or without consult to program staff. Outcomes are uniformly more favorable for the relatively small group of veterans who have a successful discharge.

# H. Outcomes in HCHV Contract Residential Treatment and the GPD Program

The HCHV contract residential treatment and GPD program evaluations are reported separately due to the different missions of these HCHV program components. Veterans are generally admitted to contract residential treatment with the goal of stabilizing active substance abuse or psychiatric problems; the program's main mission is treatment, not housing. In contrast, the GPD program's main mission is housing with varying levels of supportive services. Yet, as more GPD programs are established, some medical centers are developing a continuum of care that uses both contract residential treatment and GPD transitional housing services for their homeless veterans. The potential coordination of services between these two programs has not been reported to date. Tables 6-14 through 6-16 present data on the shared use of residential treatment and GPD services. A veteran's episodes of treatment in the two programs were linked together to determine total days in FY 2000 spent in the programs. Outcomes were reported for the <u>last</u> treatment episode in FY 2000 for each veteran. For example, if a veteran spent 60 days in contract residential treatment followed by 90 days in GPD housing, the total length of stay for that veteran would be 150 days, and only the outcomes from GPD would be reported in these tables.

Table 6-14 summarizes veterans served by HCHV residential treatment, GPD or both programs in FY 2000 (only the 31 sites that had both active residential treatment and GPD programs are included). The total number of veterans discharged by these programs was 4,249. The vast majority of these veterans (84 percent) had only one treatment episode during FY 2000. About 43 percent of the total veterans discharged were treated only in HCHV residential treatment, about 45 percent spent time only in GPD programs and 12 percent had a treatment episode in both programs during the fiscal year. The total length of stay was about 98 days. The total length of stay for the 12 percent of veterans (509 individuals) who had discharges from both programs was 149 days.

Table 6-15 summarizes the housing and employment status as reflected in the last discharge of FY 2000 from the combined RT-GPD discharge records. About half of the discharges came from GPD programs. The percentage of veterans domiciled (that is, independently housed or in a further treatment program like a halfway house) was about 60 percent. The percentage of veterans housed (which is a subset of those domiciled) was about 33 percent. About 42 percent of the veterans were employed at discharge. These overall averages are similar to those reported in the separate summaries of residential treatment and GPD (e.g., percent housed in RT is 34 percent in Table 5-2;

percent housed in GPD is 30 percent in Table 6-11). This is not unexpected because so many veterans contributing data to Table 6-15 had a single treatment episode during FY 2000. Unexpectedly, the housing and employment outcomes for the veterans who had discharges from both programs in FY 2000 (509 veterans) were somewhat less favorable than observed in the larger group. About 20 percent of veterans who had discharges from both programs were housed following their last discharge; about 35 percent were employed. Thus it would appear that the group of veterans who are served by both programs are particularly difficult cases, as they spent many more days in treatment during FY 2000, but had poorer housing and employment outcomes. This conclusion is supported by comparison of the outcomes from this group's first discharge and final discharge in FY 2000 (not shown in tables). Upon first discharge, most veterans (70 percent) were continuing care in a halfway houses or other institutional setting, 10 percent of these veterans were housed, and the housing status of 21 percent was unknown. Upon final discharge, the percentage in continued treatment was 45 percent, 20 percent were housed, and 34 percent had unknown housing status. Thus many of the veterans were kept in treatment following their first episode, but a relatively high percentage left the program without consultation following the second episode (creating the high percentage of veterans with unknown housing status).

Table 6-16 summarizes clinical improvement ratings as reflected in the last discharge of FY 2000 from the combined RT-GPD discharge records. The percentage of veterans whose problems with alcohol improved was about 58 percent; the percentage of veterans whose mental health problems improved was about 56 percent. These levels of improvement are not as high as those observed in the overall RT program, but higher than reported for the overall GPD program (see Tables 5-6 and 6-13). About 66 percent of veterans who had discharges from both programs were improved on alcohol problems following their last discharge; about 62 percent were improved on mental health problems.

# I. Summary

The GPD program continues to grow in regard to the number of programs providing services to veterans. Collectively, over 2,300 transitional housing beds are now available to homeless veterans with appreciable cost sharing by the community non-profit organizations in partnership with the VA. The similarity of demographic characteristics between those veterans contacted by the GPD in comparison to the HCHV shows that referrals to the program are appropriate. Housing, employment, and clinical improvement in "successful" discharges are very good; however the low percentage of such discharges in some programs keeps overall outcome levels low. This has been a consistent finding over the three years that the GPD program has been summarized in this report.

The combined analysis of RT and GPD programs shows that relatively few veterans are treated by both programs. Veterans who were treated in both programs during FY 2000 spent more total days in treatment, had better clinical improvement ratings and worse housing and employment outcomes. It may be that veterans spend time in both programs because their problems are especially difficult, and more program resources must be devoted to them.

#### **CHAPTER 7**

#### THE SUPPORTED HOUSING PROGRAM

## A. Background

As discussed earlier, an outcome evaluation study of the HCHV program was conducted during the first years of its implementation. This was a quasi-experimental design study conducted at nine of the original program sites. Results of the study included the findings that homeless veterans are difficult to engage in treatment unless tangible resources are offered (Rosenheck and Gallup, 1991), and that specialized services such as residential treatment are effective, but costly (Rosenheck et al., 1993).

Given the expense of residential treatment, program policymakers sought other opportunities for treatment. At the same time, a few HCHV teams, notably in Pittsburgh and Buffalo, had formed partnerships with Veterans Service Organizations and other groups to offer free or low-cost housing to formerly homeless veterans who also received case management services from VA clinicians. In order to encourage these partnerships, VA set aside one-third of the \$10 million in expansion funds in FY 93 specifically for collaborative programs. Although each of these programs is quite unique, together they were described as Supported Housing (SH). All of these programs have two common elements: community housing, and VA case management. There are 27 such programs in operation.

# **B. Program Descriptions**

SH programs may consist of permanent housing (in the type of homes where ordinary citizens may live, and without time limits), or in transitional housing (housing offered through special programs, which is not intended to be a permanent residence). Some program sites combine both types of housing. Even in transitional housing, veterans in the SH program often are expected to pay rent. This rent may be subsidized or discounted. Some SH programs partner with non-profit agencies who receive HUD Section 8 rental assistance certificates through the Shelter Plus Care program. VA clinicians offer case management through this program, creating a variation on the model used by the HUD-VASH initiative (see Chapter 8).

In addition to assisting veterans locate a place to live, SH clinicians offer many other types of practical assistance. They help the veteran to re-learn skills like budgeting, shopping, and cleaning. They also assist the veterans to find jobs, to maintain good relationships with others living in the same building or neighborhood, and to repair relationships with their families. Sometimes they do psychotherapeutic work or substance abuse counseling with the veteran, but more often they encourage and support the veteran's participation in other clinics at the VA Medical Center. Thus, SH case management is an effort to tie together all the pieces of assistance the veteran needs, so that he or she can reintegrate into community living.

<sup>1</sup> There were 26 programs funded by VACO; in FY 2000, Bedford was added when they took over case management of veterans who were originally admitted to Boston's Supported Housing program.

173

## C. Monitoring the SH Program

Every veteran who is admitted to the SH program has been assessed at intake by the HCHV team. The intake assessment provides baseline data with which subsequent progress may be compared. For the purposes of this monitoring system, work of SH clinicians during the phase of referral and placement is captured in advance of formal admission through the use of a "preresidential" program entry date. (This procedure was implemented in FY 96). Clinicians in the SH program complete a progress report six months after each veteran's admission to SH, and again at termination. (Only termination data are available for veterans terminated prior to six months.)

## **D.** Program Structure

Workload in the SH program is displayed in Table 7-1. Two measures of workload are used: encounters (visits) per clinical FTEE, and veterans treated per FTEE. The DSS Identifiers included for purposes of this report are: 529, 725, 726, and 727. These are the codes for HCHV and DCHV outpatient care.

During FY 2000, 1,229 veterans had outpatient encounters (using the DSS identifiers listed above) during the dates that they were in the SH program. This is substantially fewer than the 2,022 veterans who were active in the program, according to monitoring of admission and discharge dates. This is partly due to problems recording encounters, partly due to problems with recording dates of involvement with the program (e.g., missed discharge forms) and partly due to severe curtailment of case management activities in some programs. The workload data presented in Table 7-1 give some indication of the large differences in the program sites. Where the stop codes per FTEE are high, such as in Providence, Milwaukee and Tomah, the programs are generally transitional living environments where clinicians see the residents almost every day. Stop codes are lower in places like Boston and Indianapolis, traditional SH programs involving intensive efforts to situate veterans in permanent community living.

The critical monitor of program performance with respect to program structure is Veterans Treated per FTEE (last column, Table 7-1). Overall, 26 veterans were served per clinical FTEE. However, because some sites have brief transitional programs and other longer stay permanent housing programs, there is considerable diversity among the program sites.

#### E. Patient Characteristics

Table 7-2 presents data on demographic characteristics of veterans in SH over the period FY 98 to FY 2000. The mean age of veterans in the program is 46 years. Most veterans in the program (96 percent) are men. Slightly under half are African American, and most are either divorced (45 percent) or separated (13 percent).

In the three years prior to contact with the HCHV program, about 29 percent of the veterans were usually working full-time, and about 32 percent were working part-time. However, in the 30 days just before the intake assessment, the mean days worked was only 4. The most typical income of SH veterans at the time of intake was under \$500 per month. About 38 percent of these veterans were receiving some type of public support.

At the time of initial assessment, clinicians offer diagnostic impressions. As shown in Table 7-3, veterans in the SH program have serious clinical problems. The majority (75 percent) were diagnosed with a substance abuse disorder. Serious mental illness is not uncommon among this group: 46 percent were assigned a serious diagnosis. Overall, 86 percent of the SH veterans were deemed to have a serious psychiatric disorder or a substance abuse problem. Over one-third were assigned concomitant psychiatric and substance abuse disorders.

The homelessness of the veterans in the program is described by data in Table 7-4. The majority were literally homeless (i.e., living in streets or in shelters) at the time of the intake assessment. Although a small percent have become homeless only recently or are only at risk of homelessness, about 37 percent had been homeless for over six months at the time of intake. Over half of the veterans in the program are encountered through outreach efforts.

The characteristics of SH program veterans are quite similar to the larger outreach population from which they are drawn. Trends in the characteristics of the SH group show very little drift in the type of veterans who are brought into the program.

## F. Processes in the SH Program

#### Active Cases

Table 7-5 summarizes several process indicators for veterans who reached completed their first six months in SH during FY 2000; there were 383 veterans in this group. There is a substantial reliance on transitional housing for these new cases; After six months in the program, about 21 percent of these veterans had been placed into permanent housing. Over half of these active cases were housed in special programs for veterans, and most were living alone. The average rent paid by these veterans was \$217 per month, and 45 percent benefited from some type of rent subsidy. These subsidies are important to veterans in the SH program, as about 42 percent of them are employed full time, and monthly income is generally low.

#### Terminated Cases

Comparable information reported at discharge is reported by site in Tables 7-6 through 7-8. The group of veterans discharged during FY 2000 (N=1,004) includes many veterans who stayed in the program a short period of time; therefore they differ somewhat from the active cases just described. For example, a lower percentage of these veterans are in permanent housing at time of discharge, and more were housed in special programs for veterans. A slightly higher percentage of terminated cases as active cases receive rental subsidies (55 percent vs. 44 percent). The average rent paid in this group of terminated cases is lower than that paid by active cases (\$140 vs. \$217). About 33 percent of veterans report full time employment at time of discharge from the program.

#### G. Treatment Outcomes

Ratings of clinical improvement are shown for the group of active cases in Table 7-5 and for those discharged from the program in Table 7-9. Clinical change was rated from 1 (substantial

deterioration) to 5 (substantial improvement) for those who exhibited the problem at admission to the program. Improvement ratings for active cases on alcohol problems, drug problems and psychiatric problems are 4.1, 4.0 and 3.9 respectively. Improvement scores on the three problems areas for terminated cases is 3.6, 3.5 and 3.6, again underscoring the influence of "short stayers" in this group.

Table 7-10 shows that the average length of stay in supported housing is about nine months (265 days); however, this average is skewed by a small number of sites that have exceptionally long average stays (e.g., over 850 days in Boston, and over 1,700 days in Bronx). These programs place veterans exclusively in permanent housing and emphasize long-term case management. Slightly less than one half of terminations (45 percent) from the SH program are mutually agreed upon by the case manager and the veteran; when involuntary terminations occur (in 31 percent of the cases), it is generally for substance use rule violations.

Over half (53 percent) of veterans in SH are housed at time of termination from the program. Almost a third (33 percent) are discharged to a homeless or unknown status. These housing outcomes have remained fairly steady over the last three years.

## H. Summary

As indicated by intake characteristics, the SH program continues to contact the appropriate target population. The performance of the program remains stady on virtually all outcome measures. Like most programs for homeless individuals, the program has a high percentage of clients who leave without consultation or because of rule violations, and this may limit success on outcomes. The SH program continues to be an important resource for long-term case management for homeless veterans.

#### **CHAPTER 8**

# HOUSING AND URBAN DEVELOPMENT – VETERANS AFFAIRS SUPPORTED HOUSING PROGRAM (HUD-VASH)

## A. Background

HCHV services can be viewed on a continuum, ranging from community outreach and engagement, intensive residential treatment and ongoing case management (the original HCMI program model); transitional housing (in the Grant and Per Diem program), finally to long-term housing with case management (in the Supported Housing and HUD-VASH programs). In 1992, VA joined with the Department of Housing and Urban Development to launch the HUD-VASH program. HUD-VASH was initiated to further the objectives of serving the homeless mentally ill veteran through two closely linked interventions: (1) a housing subsidy provided through HUD's Section 8 voucher program, and (2) a community-oriented clinical case management effort. The goal of the program is to offer the homeless veteran an opportunity to rejoin the mainstream of community life, to the fullest extent possible. The main features of HUD-VASH that distinguish it from the Supported Housing program are the availability of rental assistance for every program veteran, a more formalized screening procedure, the emphasis on movement into independent community residences, and a somewhat more intensive case management model.

HUD funded three rounds of almost 600 vouchers each (a total of 1,753) for this program. The program was initially implemented in 1992 with special clinical teams at 19 VA Medical Centers. At most sites, the team consists of two case managers, usually social workers or nurses. At five special evaluation sites, an additional case manager was funded to support one of the control conditions. In 1994, a 10 new sites were added, and eight of the original program sites obtained additional vouchers. In 1995, six more sites were added, and additional vouchers were added to nine existing programs. By the end of FY 1995, 35 program sites had been funded. This report includes data from these programs through the end of FY 2000.

## **B.** Monitoring

All veterans who enter HUD-VASH has an intake assessment completed by the HCHV team. Progress of veterans through the program is monitored through case manager reports that are submitted on a regular schedule. One of these specifically addresses progress through the housing process (e.g., date the veteran received the Section 8 voucher, date the veteran moved into his or her apartment). Another case manager report provides information about the veterans participation in the program, perceptions of treatment relationship, nature and intensity of case management services provided, housing and employment status and ratings of clinical change in the veteran since the beginning of the program. In addition to case manager reports, a veteran report of perceived treatment relationship is collected. The monitoring system is designed to monitor a veteran's participation in the program for five years. Additional information is collected through VA administrative data bases (e.g., outpatient visits to the HUD-VASH program are recorded through DSS Identifier 522).

## C. Program Structure and Resources

The clinical staffing of HUD-VASH programs as of the end of FY 2000 is listed in Table 8-1. Most programs were initially set up as two or three person teams, although the number of allocated staff ranges from one to 4.5. Of the 78.5 FTEE originally allocated to the program, 64.8 (82 percent) are still working with the program. In addition, 2.5 FTEE have been detailed to the HUD-VASH program from other medical center services (called "donated" staff in Table 8-1). Two sites expanded fully staffed programs (Tampa and Miami). Overall, staff erosion in the HUD-VASH program has been more substantial than elsewhere in the HCHV (compare the 86 percent staffing level in Table 8-1 with the 96 percent staffing level in Table 2-2). Staffing cuts have completely eliminated or reduced by half the staffing at five programs. Some of these programs have substantially curtailed program activities, or have used HCHV case managers to partially restore program capacity.

Utilization of HUD Section 8 vouchers is reported regularly by program staff; this usage is displayed in Table 8-2. Veterans entering and leaving the program cause the number of vouchers in use to fluctuate over time; thus, the number of vouchers in use was based on a monthly average in FY 2000. Overall, close to 90 percent of the allocated vouchers is in use. Effects of the staff erosion that was noted in Table 8-1 can be seen here. For example, programs that have had long-standing staffing vacancies (such as Syracuse) have low voucher use due to an inability to assist veterans through the housing process. In contrast, a restored case manager position at Roseburg has dramatically increased the number of vouchers utilized. Paradoxically, there are long-standing, well-staffed programs (such as Little Rock) that have been unable to use an appreciable portion of their vouchers. Other sites such as Buffalo, Cincinnati, Hines, San Antonio, Loma Linda and West Haven have actually used *more* vouchers than were initially allocated by HUD. Their local housing authorities have given these programs additional vouchers based on the programs' success with their clients.

Table 8-3 shows the workload in the HUD-VASH program for FY 99 and FY 2000, as recorded by outpatient visits to the program (DSS Identifier 522). One striking feature of these encounter data is that HUD-VASH clinicians see many more veterans than are formally screened or admitted by the program. Conversations with program clinicians suggest that many veterans who are initially contacted with the prospect of entering HUD-VASH never get to the formal screening. Additionally, some clinicians conduct educational groups for prospective program veterans. There are some sites where the discrepancy between veterans contacted and veterans admitted is large. For example, Little Rock contacted over 700 veterans per year in FY 99 and FY 2000; yet this program has formally admitted about 100 veterans in eight years of operation.

## D. Number and Characteristics of Program Veterans

Table 8-4 shows the number of veterans screened, admitted and terminated from the HUD-VASH program through the end of FY 2000. Over 4,600 veterans have been screened for admission; about 80 percent of those screened were admitted. Of those veterans admitted to the program, about 39 percent are still actively case managed. Some of these veterans have been in the program for the entire eight years it has been in existence; however, the median number of years for active veterans is 2.6 years. The median number of years for those veterans who had terminated

involvement was 0.5. Longevity in the program shows considerable variability across program sites, both for active and for terminated veterans. Table 8-5 shows the percentage of veterans who are still active in the program, by fiscal year. About a quarter of the veterans from the earliest years of the program are still active. The table also shows the ongoing nature of turnover in the program; about 20 percent of veterans admitted to the program in FY 2000 were also terminated in that year.

Table 8-6 shows the reasons for terminating involvement in the HUD-VASH program. About 22 percent of veterans leave the program because treatment goals have been met, and case management is no longer needed. About a third of veterans leave the program because of substance abuse or some other rule violation. About five percent needed a more intensive treatment program. Many of veterans who are listed in the "other" category left the program without consultation.

Demographic and clinical characteristics of HUD-VASH veterans are shown in Table 8-7. These characteristics are summarized separately for veterans who were admitted under the original admission criteria (prior to FY 98) and those admitted under a revised admission criteria (after FY 98)<sup>1</sup>. Table 8-7 shows that this change in criteria has had some influence in the veterans who are admitted to the program. Recent admissions have spent more days housed and fewer days homeless in the 30 days preceding intake. There also appears to be a somewhat higher percentage of veterans admitted to the program who have serious medical problems. Overall, it is clear that HUD-VASH serves a population that is similar to the larger HCHV population and is in need of case management services.

## E. HUD-VASH Case Management

Tables 8-8A through 8-8C list the number of case management contacts and primary case manager roles during the three months prior to the report at three follow-up intervals (3 months, 18 months and 3 years). As would be expected in a long-term case management program, the average number of contacts decreases from about 11 during the first three months of program involvement to about eight in months 15-18 and about seven in months 33-36. Emphasis of the casework also changes over time. Case managers spend more time establishing the relationship with the veteran and assisting in the housing process early on, then shift to a more supportive role that may include counseling later on. One aspect of casework that appears to remain fairly steady over time is the facilitation of connections to resources (such as benefit payments) for the veteran. These tables show the appreciable attrition over the course of follow-up. Over 3,200 veterans were followed up at three months, but the number followed up at 3 years drops to just under 1,000.

Table 8-9 shows case manager and veteran ratings of therapeutic alliance at the first followup interval. The therapeutic alliance scale is a five item scale based on Horvath and Greenberg's

-

<sup>&</sup>lt;sup>1</sup> Between FY 92 and FY 98 eligibility for HUD-VASH was determined by the following screening criteria: 1) must be homeless for 30 or more days prior to their initial contact with the HCMI or DCHV program, and living in a shelter or on the street at the point of the initial contact with the program; 2) must have a major substance abuse or psychiatric disorder resulting in significant disability; 3) must be clinically stabilized prior to participation in the program; 4) must demonstrate an interest in changing his or her lifestyle and in returning to work or to some other socially productive activity; 5) must be prepared to make a long-term commitment to participate in a VA program of community-based treatment, rehabilitation and supported housing. Since FY 98, failure to meet some of these criteria <u>lowers priority</u> for program entry, but does not strictly <u>prevent</u> it.

(1989) Working Alliance Inventory. The scale includes items such as "This veteran and I have a common perception of his/her goals" and "We have established a good understanding of the kinds of changes that would be good for him/her." Each item is scored from 0 (Never) to 6 (Always). The average case manager score was 4.4 and the average veteran score was 5.0, indicating that there is the formation of a good working relationship early on in HUD-VASH casework. Past analyses of the HUD-VASH program show that therapeutic alliance is an important predictor of referral to the program and of early success (such as obtaining a housing voucher). It becomes less predictive later in the process (e.g., predicting one-year housing retention), perhaps because the ratings become less variable (Kasprow, Rosenheck, Frisman & DiLella, 2000). Therapeutic alliance scores stay at a high level throughout the follow-up period; however, attrition from follow-up introduces a bias into these scores (i.e., dissatisfied clients are more likely to terminate and therefore not contribute ratings in later follow-up). It is for this reason that therapeutic alliance ratings from later follow-up dates are not shown.

#### F. Veteran Outcomes

The HUD-VASH program excels at establishing veterans in their own apartments. Tables 8-10A through 8-10C document housing outcomes at 3 months, 18 months and 3 years after program admission. Within 3 months of admission, about two-thirds of HUD-VASH veterans are successfully housed. At the 18-month and 3-year follow-up intervals, the percentage of veterans housed is approximately 95 percent. Although conclusions about outcomes at the 18-month and 3-year intervals have to be tempered in recognition of the appreciable attrition that occurs, these housing percentages compare favorably to other supported housing programs using HUD Section 8 vouchers (e.g., Tsemberis, 1999).

Tables 8-11A through 8-11C list the percentage of veterans improving their employment status, financial status and living skills at 3, 18 and 36 months into the program (ratings are relative to the veteran's level at the start of the program, and are only conducted for veterans judged to have problems in these areas at admission; this includes about 85-90 percent of veterans). About 40 percent of veterans improve their employment status, approximately 60 percent improve their financial status and almost 70 percent improve their living skills. These ratings are quite stable over the three follow-up intervals.

Tables 8-12A through 8-12C list the percentage of veterans improving on alcohol, drug and mental health problems at the same three follow-up intervals. Again, improvement ratings are conducted only for veterans who exhibit these problems at admission; this includes about 70-75 percent of the group. About 60 percent of veterans are rated as having improved in these areas, and ratings of improvement remain stable over the follow-up intervals.

## **G.** Summary

The HUD-VASH program is a low-turnover, intensive case management program that provides stable independent housing for some of the most difficult-to-treat homeless veterans. The Section 8 rental assistance provided by HUD is a considerable resource for these homeless veterans. Monitoring data suggest that the case management received by these veterans helps to use this resource efficiently. HUD-VASH case managers establish long-term relationships with their clients

(almost 40 percent of the veterans ever enrolled in the program are still in it), and adapt their casework to the changing needs of the veterans. The percentage of veterans who exit the program because they no longer require case management or rental assistance is relatively low (about 20 percent). However, given the appreciable problems facing these veterans at program entry, such a stringent definition of "success" may not be warranted. It is clear that the program does provide exceptional housing stability for many homeless veterans.

### BLANK

### **CHAPTER 9**

#### SUMMARY OF PROGRAM PERFORMANCE

### **A. Summary of Critical Monitors**

Measures which are considered critical monitors of program performance were selected to reflect important principles about the program. Critical monitors are broken down into four types: structural measures, measures of patient characteristics, process measures, and outcome measures. Outlier values on critical monitors are listed for each site in Tables 9-1 through 9-4, and are summarized in Tables 9-5 and 9-6<sup>1</sup>. The letters preceding each monitor in the following list also serve to identify each monitor in Tables 9-1 through 9-4.

#### Structural Measures

Critical monitors relating to the quantity or intensity of services given to veterans in the program are termed structural measures and are shown in Table 9-1. The monitoring of program structure is intended to ensure that resources are used efficiently; i.e., that all clinicians assigned to the program are generating adequate workload, and that contract residential treatment dollars are distributed among veterans in the program fairly. The following are structural critical monitors:

- A. **Mean Days in Residential Treatment** (from Table 2-4). This monitor shows the average length of stay per episode of residential treatment. (Low and high values are outliers<sup>2</sup>). *The data source for this monitor is the Form 5R (Discharge from Residential Treatment form)*.
- B. Unique Veterans Served Per Clinician (from Table 2-6). These are the number of unique veterans with at least one clinical encounter with the HCHV program (DSS Identifier 529) during FY 2000, divided by the number of clinical FTEE allocated by VA Central Office. Here, FTEE include all staff who can generate HCHV workload (HCHV outreach staff and Supported Housing case managers). They do not include Veterans Industries or HUD-VASH FTEE. (Low values are outliers). The data source for this monitor is the Outpatient Treatment File.
- C. **Visits Per Clinician** (from Table 2-6). This monitor shows the number of HCHV clinical encounters (recorded through DSS Identifier 529) per clinical FTEE allocated by Central Office. Again, all clinicians who can generate HCHV workload are included. (Low values are outliers). *The data source for this monitor is the Outpatient Treatment File.*
- D. **Percentage Change in Intakes, FY 99-00** (from Table 2-7). This change variable records the difference in the number of intakes per outreach clinician from FY 1999 to FY 2000 (Supported Housing case managers are not included in staff counts here). (Low values are outliers). *The data source for this monitor is the number of Form Xs completed.*

1

<sup>&</sup>lt;sup>1</sup> Outlier values were not calculated for program newly funded in FY 2000.

<sup>&</sup>lt;sup>2</sup> Low value outliers were added after the draft report had been distributed. Therefore these outliers were not included in Tables 9-1 and 9-7.

- E. **Literally Homeless Intakes Per Clinician** (from Table 3-3). This is the total number of intake forms (Form Xs) completed on veterans who are literally homeless (living in streets or in shelters) at the site during FY 2000, divided by the number of allocated outreach FTEE. Note that this is actually a measure of both structure (because the adequacy of staffing is one factor in the ratio) <u>and</u> efficiency (because it also addresses the effort put into outreach). (Low values are outliers). *The data source for this monitor is the Form X, item 9.*
- F. **Veterans Treated Per FTEE in Supported Housing** (from Table 7-1). This measure is the number of veterans with at least one clinical encounter with the HCHV program during their enrollment in the Supported Housing program, divided by the number of FTEE allocated by VA Central Office for Supported Housing. (Low values are outliers). *The data source for this monitor is the Outpatient Care File, DSS Identifier 529 and Supported Housing admission records.*

### Patient Characteristics

Critical monitors of patient characteristics are used to identify sites which may not be targeting an appropriate population. Because of the extent of homelessness among veterans, HCHV program resources are clearly insufficient to help all veterans who need services. When the program was established, it was agreed that program resources should be directed to veterans who are very needy and have been underserved. Although many veterans who are inpatients in VA medical centers may not have a suitable home to which to be discharged, these veterans do have the resources of other VA clinical staff to assist them. Also, they are on average not as alienated from VA and other helping agencies as the veterans who are contacted through community outreach. Therefore, program resources should not be used for hospital discharge planning. Also, veterans who are more severely homeless and those who have the most severe substance abuse and psychiatric problems should be given priority for service. The following are critical monitors for Patient Characteristics (summarized in Table 9-2):

- G. **Percentage Not Strictly Homeless** (Table 3-3). This figure shows the percentage of veterans who, at the time of initial assessment, were living in their own apartment, with others, or in an institution. (High values are outliers). *The data source for this monitor is the Form X, item 9.*
- H. **Percentage with No Time Homeless** (Table 3-5). This variable identifies the percentage of veterans assessed for the program who had spent no time homeless. (High values are outliers). *The data source for this monitor is the Form X, item 10.*
- I. **Difference in Percentage Not Strictly Homeless, FY 99-00** (Table 3-6), compares the current percentage not strictly homeless to that from the previous year, to determine whether the program site is maintaining focus on outreach to homeless veterans. (High values are outliers). *The data source for this monitor is the Form X, item 9.*
- J. **Difference in Percentage Homeless Less than One Month, FY 99-00** (Table 3-6), also compares homelessness from one year to the next. (High values are outliers). *The data source for this monitor is the Form X, item 10.*

- K. **Percentage with Serious Psychiatric or Substance Abuse Disorder** (Table 3-7) shows the percentage of veterans contacted who have a diagnosis of substance abuse disorder (alcohol abuse/dependency, drug abuse/dependency) or serious mental illness (schizophrenia, other psychotic disorder, affective disorder, PTSD). (Low values are outliers). *The data source for this monitor is the veteran's diagnoses recorded by the outreach clinician on the Form X*.
- L. **Difference in Percentage with Serious Psychiatric or Substance Abuse Disorder, FY 99 -00** (Table 3-8) considers the same variable, but as a trend from the previous year. (Low values are outliers). *The data source for this monitor is the veteran's diagnosis recorded by the outreach clinician on the Form X.*
- M. Percentage of Literally Homeless Veterans in Supported Housing (Table 7-4) measures the percentage of veterans who are literally homeless (living in streets or in shelters) at intake and are subsequently admitted to the Supported Housing program. (Low values are outliers). *The data* source for this monitor is the Form X, item 9.

#### **Process Measures**

Process critical monitors, shown in Table 9-5, reflect a program's operation with respect to the focus on outreach and the selection of veterans for placement in contract residential treatment. The following are critical monitors for Program Process:

- N. **Percentage Contacted through Outreach** (Table 4-1) shows the degree of program emphasis on outreach, compared to program entry of other types. Special community-based drop-in centers and other special arrangements with community programs are included as outreach. (Low values are outliers). *The data source for this monitor is the Form X, item 47.*
- O. The Difference in Percentage Contacted through Outreach, FY 99-00 (Table 4-3) shows the change in outreach efforts between FY 1999 and 2000. (Low values are outliers). *The data source for this monitor is the Form X, item 47*.
- P. Homelessness of Veterans Admitted to Residential Treatment (Table 4-8). Compares percentage of veterans who were literally homeless at intake and subsequently admitted to residential treatment to the percentage of those homeless who were not admitted by forming a ratio of these two percentages. A high ratio suggests that veterans with that characteristic were more likely to be admitted to residential treatment. It thus reflects selection processes for admission to residential treatment. (Low values are outliers). *The data source for this monitor is the residential treatment admission list and the Form X, item 9.*
- Q. Psychiatric and Substance Abuse Problems of Veterans Admitted to Residential Treatment (Table 4-9). Forms a ratio similar to the one in Table 4-8, but focuses on diagnosis of psychiatric and substance abuse problems. (Low values are outliers). *The data source for this monitor is the veteran's diagnosis recorded by the outreach clinician on the Form X.*
- R. **Appropriateness for Residential Treatment** (Table 4-10). This monitor indicates the proportion of veterans admitted to residential treatment who *may* have been inappropriate for

placement because of lack of mental health problems, no homelessness, or high income. It should be noted that admission may have been warranted (for example, because of a change in income or homelessness from the time of the intake assessment to admission), but a high percentage of potentially inappropriate admissions warrants review of admission policies. (High values are outliers). The data source for this monitor is the Form X, items 9 (homelessness), 34 (income), and the veteran's diagnosis recorded by the outreach clinician.

- S. Percentage of Veterans Admitted to Residential Treatment whose intakes were completed while they were hospitalized (Table 4-11). compares date of intake with dates of hospitalization recorded in the Patient Treatment File. (High values are outliers). *The data source for this monitor is the Patient Treatment File and the Form X*.
- T. **VA Outreach in Supported Housing** (Table 7-4) shows the percentage of Supported Housing veterans who were contacted through outreach. (Low values are outliers). *The data source for this monitor is the Form X, item 47.*
- U. **Mean Total Days in Supported Housing** (Table 7-10) shows the length of episodes of treatment among veterans discharged from supported housing programs. Note that both very long and very short mean lengths of stay are identified as outliers. *The data source for this monitor is the Form SH-R*.

#### Outcome Measures

Outcome measures, shown in Table 9-4, indicate the program's performance with respect to clinical outcomes from residential treatment or Supported Housing. The following measures are Outcome critical monitors:

V-AB. Successful Completion of Residential Treatment; Domiciled (including those in independent housing and those who are in secure institutional arrangements); Housed; Employed; Improved Psychiatric Symptoms; Improved Alcohol Symptoms, and Actual Follow-up (Table 5-12). Table 5-12 is different than other tables, because data in this table have been adjusted for client characteristics that may affect outcomes. Selection of these adjusting variables differs depending on the outcome addressed, but they include age, race, previous psychiatric hospitalization, income, homelessness, symptom severity, and combat history (all are taken from the Form X). EACH COLUMN OF TABLE 5-12 SHOWS THE PERCENTAGE AND DIRECTION THAT EACH SITE DIFFERS FROM THE SITE WITH THE MEDIAN VALUE ON THE OUTCOME. Sites with 0.0% difference are the median sites. (Low values are outliers).

Data sources for the outcome variables are as follows:

Successful Program Completion: Form 5R, item 16.

Domiciled and Housed: Form 5R, item 18.

Employed: Form 5R, item 20.

Improved Psychiatric Symptoms: Form 5R, item 21.

Improved Alcohol Symptoms: Form 5R, item 22.

Actual Follow-up: Outpatient mental health encounters recorded in the Outpatient Care File.

AC-AD. **Alcohol and Psychiatric Symptom Improvement in Supported Housing** (Table 7-9) shows the symptom changes in these areas from admission to discharge from supported housing, for discharged cases only. (Low values are outliers). *The data source for this monitor is the Form SH-R, items 12a and 12c.* 

AE. **Mutually Agreed Termination from Supported Housing** (Table 7-10) shows the percentage of regular discharges. (Low values are outliers). *The data source for this monitor is the Form SH-R, item 14*.

AF. **Discharge from Supported Housing to Homeless or Unknown Housing** (Table 7-11) shows percentage of discharges from the supported housing program that were into non-secure arrangements. (High values are outliers). *The data source for this monitor is the Form SH-R, item* 15.

### **B. Summary of Critical Monitors and Program Response**

The total number of critical monitor outliers for each site is reported on Table 9-5, and summarized by VISN in Table 9-6. An earlier draft of the data included in this report were sent to each program coordinator for site for review of accuracy, and to the Director of each VA Medical Center supporting a HCHV program for the Director's review and responses to the monitors. Site coordinators were asked to respond to outlying values of critical monitors. A summary of the responses is included in Tables 9-7 through 9-10. (These tables correspond to the four tables of critical monitor outliers, Tables 9-1 through 9-4.) As shown in the legend on these tables, there are six possible responses, each of which requires further explanation from the site coordinator: (a) legitimate differences in the program at this site, which do not conflict with national program goals; (b) local policies at this site, which may conflict with national goals; (c) problems in the implementation of the program, for which corrective action has since been taken; (d) problems in the implementation of the program, for which corrective action has since been planned; (e) problems in the implementation of the program, for which corrective action has not yet been planned; and (f) other problems not related to appropriate program policies, such as data recording problems. Sites that did not respond to an outlier value were noted with an "N." When outlier values resulted from re-calculations of tables after the draft data were sent out, collection of program responses was not possible, an "O" has been recorded in these cells.

Sites identified as an outlier due to insufficient data are indicated with an I

Monitors that are not applicable to a program site are indicated by blacked-out cells.

Outliers were not calculated for newly-funded programs; these monitors are indicated by checker-pattern cells

Sites identified as an outlier due to insufficient data are indicated with an I
Monitors that are not applicable to a program site are indicated by blacked-out cells.

Outliers were not calculated for newly-funded programs; these monitors are indicated by checker-pattern cells

Monitors that are not applicable to a	program site are	indicated by b	lacked out	calle			· · · · · · · · · · · · · · · · · · ·

Monitors that are not applicable to a program site are indicated by blacked-out cells.

Outliers were not calculated for newly-funded programs; these monitors are indicated by checker-pattern cells

- A. Legitimate differences in the program at this site, which do not conflict with national goals.
- B. Local policies at this site, which may conflict with national goals.
- C. Problems in the implementation of the program, for which corrective action has been taken.
- D. Problems in the implementation of the program, for which corrective action has been planned.
- E. Problems in the implementation of the program, corrective action has not yet been planned.
- F. Other (e.g., data recording problem; low N).
- N. Site did not respond to the outlier value.
- O. Outlier value was created upon draft revision, therefore site was not requested to respond to this outlier.

Monitors that are not applicable to a program site are indicated by blacked-out cells.

Outliers were not calculated for newly-funded programs; these monitors are indicated by checker-pattern cells

- A. Legitimate differences in the program at this site, which do not conflict with national goals.
- B. Local policies at this site, which may conflict with national goals.
- C. Problems in the implementation of the program, for which corrective action has been taken.
- D. Problems in the implementation of the program, for which corrective action has been planned.
- E. Problems in the implementation of the program, corrective action has not yet been planned.
- F. Other (e.g., data recording problem; low N).
- N. Site did not respond to the outlier value.
- O. Outlier value was created upon draft revision, therefore site was not requested to respond to this outlier.

### Page 2 of 4

11. During the past 30 days (1 month), how many days did you sleep in the following ki of places? (Note: Estimates may often be necessary here. In such cases, make sure		
of days adds up to 30)	the number	
a. Own apartment, room or house		(56)
b. Someone else's apartment, room or house		(58)
c. Hospital or nursing home (including detox centers with		(50)
medical staff on-site)		(60)
d. Domiciliary		(62)
e. VA contracted halfway programs (ATU-HWH or HCMI contract)		(64)
f. Non-VA halfway house program		(66)
g. Hotel, Single Room Occupancy (SRO), boarding home		(68)
h. Shelter for the homeless (including detox centers with		(00)
no medical staff on-site)		(70)
i. Outdoors (sidewalk, park), abandoned building		(72)
j. Automobile, truck, boat		(74)
k. Prison, jail		(76)
		(78)
IV. MEDICAL		
12. Do you feel you have any serious medical problems (veteran's perception)?	□ 0=No □ 1=Yes	(79)
13. Does the veteran have or has the veteran complained of any of the following medical		
problems (check one box for each question)?  a. Oral/dental problems	□ 0=No □ 1=Yes	(80)
b. Eye problems (other than glasses)	0=No 1=Yes	(80)
c. Hypertension	0=No 1=Yes	(82)
d. Heart or cardiovascular problems		` ′
		(83)
e. COPD/emphysema	0=No 1=Yes	(84)
f. TB	0=No 1=Yes	(85)
g. Gastrointestinal problems	□ 0=No □ 1=Yes	(86)
h. Liver disease	□ 0=No □ 1=Yes	(87)
i. Seizure disorder	0=No 1=Yes	(88)
j Orthopedic problems	0=No 1=Yes	(89)
k. Significant skin problems	□ 0=No □ 1=Yes	(90)
1. Significant trauma	0=No 1=Yes	(91)
m. Other (specify)	□ 0=No □ 1=Yes	(92)
Office use only DO NOT CODE		(94)
V. SUBSTANCE ABUSE	— —	
14. Do you have a problem with alcohol dependency now (veteran's perception)?	0=No 1=Yes	(95)
15. Have you had a problem with alcohol dependency in the past?	0=No 1=Yes	(96)
16. Have you ever been hospitalized for treatment of alcoholism?	□ 0=No □ 1=Yes	(97)
17. During the past 30 days, how many days would you say that you used any alcohol		
at all? (If none, skip to number 18)		(99)
17a. During the past 30 days, how many days would you say that you drank to intoxication	n?	(101)

# Health Care for Homeless Veterans CONTACT FORM

Page 3 of 4

19.	Do you have a problem with drug dependency now (veteran's perception)?	<ul> <li>□ 0=No □ 1=Yes</li> <li>□ 0=No □ 1=Yes</li> <li>□ 0=No □ 1=Yes</li> </ul>	(102) (103) (104)
21.	During the past 30 days, how many days would you say that you used any other drugs, such as heroin or methadone; barbiturates (downs); cocaine or crack; amphetamines (speed); hallucinogens, like acid; or inhalants, like glue or nitrous oxide? (If none, skip to number 23).	_	(106)
22.	During the past 30 days, how many days would you say you used more than one kind of drug?		(108)
VI.	PSYCHIATRIC STATUS		
	Do you think that you have any current psychiatric or emotional problem(s) other than		
	alcohol or drug use?	□ 0=No □ 1=Yes	(109)
24.	Have you ever been hospitalized for a psychiatric problem (Do not include substance		
2.5	abuse treatment)?	□ 0=No □ 1=Yes	(110)
25.	Have you used the VA medical system for medical and/or psychiatric care in the past 6 mos.?	□ 0=No □ 1=Yes	(111)
26.	Now I'm going to ask you about some psychological or emotional problems you might		
	have had in the past 30 days. You can just say "yes" or "no" for these. During the past		
	30 days, have you had a period (that was not the direct result of alcohol or drug use) in which you (Check one answer for each item; blank responses will not be		
	considered a "no" response)		
	aexperienced a serious depression	□0=No □1=Yes	(112)
	bexperienced a scrious acpression	$\square 0=\text{No} \square 1=\text{Tes}$	(112)
	cexperienced hallucinations		(114)
	dexperienced trouble understanding, concentrating, or remembering		(115)
	ehad trouble controlling violent behavior	$\square 0=\text{No} \square 1=\text{Yes}$	(116)
	fhad serious thoughts of suicide		(117)
	gattempted suicide	$\square 0=No \square 1=Yes$	(118)
	htook prescribed medication for a psychological/emotional problem	$\square 0=\text{No} \square 1=\text{Yes}$	(119)
VII	. EMPLOYMENT STATUS		(11))
	What is your usual employment pattern, past three years (check only one)?		
	Full time (40 hrs/wk) 4. Part time (irreg. daywork) 7. Retired/disc	ability	(120)
	2. Full time (irregular)		( -/
	3. Part time (reg. hrs.) 6. Service		
	How many days did you work for pay in the past 30 days?	•••	(122)
	- 33. Do you receive any of the following kinds of public financial support	<del></del>	` ′
	(check one box for each question)?		
	29. Service Connected/Psychiatry	□0=No □1=Yes	(123)
	30. Service Connected/Other	□0=No □1=Yes	(124)
	31. Receives NSC pension	□0=No □1=Yes	(125)
	32. Non-VA disability (eg SSDI)	□0=No □1=Yes	(126)
	33. Other public support (including cash and inkind services)	□0=No □1=Yes	(127)
34.	How much money did you receive in the past thirty days (include all sources of income: work	,	
_	disability payments, panhandling, plasma donations etc.)(select one)?		
	1. No income at all 3. \$50-\$99 5. \$500-\$999		(128)
	2. \$1-\$49    □ 4. \$100-\$499    □ 6. \$1000 or more

41. Mood Disorder	□0=No □1=Yes	(135)
42. Personality Disorder (DSM-IIIR, Axis 2)	□0=No □1=Yes	(136)
43. PTSD from Combat	□0=No □1=Yes	(137)
44. Adjustment Disorder	□0=No □1=Yes	(138)
45. Other Psychiatric Disorder	□0=No □1=Yes	(139)
46. Where did this interview take place (check only one)?		( /
1. Shelter or temporary 3. Soup Kitchen 6.* At special program for		(140)
housing for homeless 4. VAMC homeless (specify		( -/
2. Street, Park, Outdoors 5. Vet Center 7. Other		
Office use only DO NOT CODE		
(143)		
47. How was contact with this program initiated (check only one)?		
1. Outreach initiated by VA staff  5. Veteran came to Vet Cente	r	(144)
2. Referred by shelter staff or other non-VA staff  [6. Self-referred]	•	(111)
working in a program for the homeless  7.* Through VA presence at s	necial program	
3. Referral from VAMC inpatient unit for homeless (specify	)	
4. Referral from VAMC outpatient unit  8. Other	,	
Office use only DO NOT CODE		
(147)		
48. Veteran response to contact (check only one).		
1. Would not talk to VA staff  4. Is interested in full range of VA serv	ices	(148)
2. Talked; not interested in any services for the homeless	ices	(140)
3. Only interested in basic services 5. Other		
49-60. What are your immediate plans for referral or treatment of the veteran at this time		
(check one box for each question)?		
49. Basic services (food, shelter, clothing and financial assistance)	□ 0=No □ 1=Yes	(149)
50. VA medical services.	0=No 1=Yes	(150)
51. Non-VA medical services.	0=No 1=1es	(150)
52. VA psychiatric or substance abuse services.	□ 0=No □ 1=1es □ 0=No □ 1=Yes	(151)
53. Non-VA psychiatric or substance abuse services	0=No 1=1es	
• •	= =	(153)
54. VA pension or disability application		(154)
55. Contract residential treatment through HCMI Program	□ 0=No □ 1=Yes	(155)
56. VA Domiciliary Care Program	□ 0=No □ 1=Yes	(156)
57. Upgrading of military discharge	□ 0=No □ 1=Yes	(157)
58. Legal assistance	□ 0=No □ 1=Yes	(158)
59. Social vocational assistance	□ 0=No □ 1=Yes	(159)
60. Other	□ 0=No □1=Yes	(160)
	**	/4 -4:
	<u>X</u>	(161)

<sup>\*</sup>Do not use this category unless the specific program has been officially identified a special program for the homeless by VA's Northeast Program Evaluation Center.

FORM 5R (2)

## DISCHARGE FROM RESIDENTIAL TREATMENT (DRT) FORM 5

Use this form only for veterans who are placed in contracted residential treatment, under the HCMI program. Complete a new Discharge from Residential Treatment (DRT) Form any time that a veteran is formally discharged or has left the residential program and it is unlikely that the veteran will return to that program.

1.	VA staff member completing this report		
I. V	eteran Information		
2.	VA Facility Code		(5)
3.	Veteran's Name		
4.	Social Security Number		(14)
5.	Veteran's Date of Birth	/ /	(20)
II. F	Residential Treatment Stay		
6.	What is the source of payment for the day by this report?  0 HCMI Contract funds  1 Veteran is paying his or her own w  2 Payment by non-VA community pay  3 Payment by HCMI contract, but at  * Use only for continuations of treat	ay * artner *	(21)
7.	Name of Residential Provider	(DO NOT CODE)	(24)
8.	Period covered by this report (Code dates: mm/dd/yy)	Beginning: / /	(30)
		Ending: / /	(36)
9.	Number of days		(39)
10.	Cost of treatment under this provider (Round to nearest dollar)	\$,	(44)

# II. Veteran's Status at Admission

11-15. At the time of admission to residential treatment the veteran demonstrated problems with:

Code:	0=No				
	1=Yes	3			
11.	Alcoho	ol abuse	····· –	(45)	
12.	Drug abuse				
13.	Mental	illness	····· –	(47)	
14.	Medica	al problems	····· –	(48)	
15.	Social	or vocational skill deficits	–	(49)	
V. St	atus a	t End of Treatment			
16.	The vo	eteran ended residential treatment because	_	(50)	
	0	Treatment episode is continuing under alternate payment arrangements			
	1	Successful completion of the program.			
	2	Veteran was asked to leave because of violation of program rules.			
	3	Veteran left the program by his/her own decision, without medical advice.			
	4	Veteran became too ill (mentally or physically) to complete the program.			
	5	Other		(52)	
			(DO NOT CODE)		
17.	If the v	veteran ended residential treatment because of a rule violation, what was the	_	(53)	
	most ii	mportant reason?			
	1	Threatened/actual violence to self or others			
	2	Use of alcohol or drugs			
	3	Other	(DO NOT CODE)	(55)	
10	The	stanon's living situation of displaces is.		(5.6)	
18.	The vo	eteran's living situation at discharge is:  No residence.	_	(56)	
	1	Single room occupancy.			
	2 3	Halfway house/transitional living program.			
	4	Institution (hospital, prison, nursing home or domicilliary).  Apartment, room or house.			
	5	Veteran left program without giving indication of living arrangement.			
	6	Other		(58)	
	U	Other	(DO NOT CODE)	(36)	
19.	With	whom will the veteran be living at discharge?		(59)	
	0	No residence.	<del>_</del>	, ,	
	1	Alone.			
	2	With spouse and or children.			
	3	With parents, with siblings, and/or with other family.			
	4	With friends.			
	5	With strangers.			
	6	Veteran left program without giving indication of living arrangement.			

- 20. What is the veterans arrangement for employment at the time of discharge? (60)
  - 0 Disabled or retired.
  - 1 Unemployed.
  - 2 Part-time or temporary employment.
  - 3 Full-time employment.
  - 4 VA's IT or CWT (VI)
  - 5 Other vocational training, or unpaid volunteer.
  - 6 Student
  - 7 Veteran left program without giving indication of employment arrangement.

21-25. Changes in clinical status: Consider the following clinical problem areas and select the description that best describes the change in the veteran's clinical status from the beginning of the residential treatment episode to the time of discharge from the residential treatment program.

	Code:	N	0	1	2	3	4	5
		No	Not a	Substantial	Some	No	Some	Substantial
		Knowledge	Problem Area	Deterioration	Deterioration	Change	Improvement	Improvement
21.	Alcohol problems							
22.	Drug problems							(62)
23.	Mental health problems (other than drug or alcohol)							(63)
24.	Medical problems						(64)	
25.	Social or vocational skill deficits							(65)

### VI. Follow-up Arrangements

26-30. Treatment Codes: Consider the arrangements for follow-up treatment. Select the code that best describes arrangements made at discharge. Include arrangements for VA and non-VA treatment.

Code: 0 None.

- 1 Arrangements made for treatment.
- 2 Veteran already receiving treatment and will continue.

26.	Alcohol problems	_ (66)
27.	Drug problems	_ (67)
	Mental health problems (other than drug or alcohol)	(68)
	Medical problems	_ (69)
	Social or vocational skill deficits	$\overline{}$ (70)

### **Supported Housing Report**

Page 1 of 3

I. IDE	ENTIFYING DATA	
1.	Clinician's name VA Facility Code DO NOT CODE	(6) (8)
2.	Date of this report (mm/dd/yy) / /	(14)
	2a. Reason for this report (check only one)   1. Progress Report   2. Termination Report	(15)
3.	Veteran's Name (last name, first initial)	(26)
4.	Social Security Number	(35)
5.	Date of Birth (mm/dd/yy) / /	(41)
II. PR	ROGRAM ENTRY	
6.	Where was the veteran sleeping the night before s/he began the Supported Housing  Program? (Supported Housing program begins when veteran begins to sleep in a supported housing placement.) (check only one)  1. Community loction (shelter, street)	(21) (42)
	☐ 2. Apartment, room or house ☐ 6. Other VA inpatient service	(12)
	<ul><li>3. Residential treatment contracted by VA</li><li>7. VA Residential treatment program (VI/TR, PRRTP etc.)</li></ul>	
	4. Residential treatment not contracted by VA	
7.	What was the first date that veteran slept in supported housing placement?  (mm/dd/yy)  / /	(48)
8.	Has the veteran terminated his/her involvement in the Supported Housing program? ☐ 0= No ☐ 1=Yes	(49)
III. SI	UPPORTED HOUSING ARRANGEMENTS	
9.	The following questions pertain to the apartment, room or house in which the veteran lives/ed as his/her supported housing placement (Note: If the veteran stayed in more than one apartment room or house since program entry, please answer questions 9a-9h with regard to the most recent place.)	
9a.	How many months has the veteran slept in this apartment since entering the Supported Housing program (Round to the nearest month) (Include time veteran maintained the apartment, even if s/he stayed elsewhere.) # mos	(51)
9b.	Is/was this apartment, room or house permanent or transitional (check only one)  1. Permanent (an apartment or room in which the veteran is permitted to maintain even after program termination)  2. Transitional (an apartment or room which the veteran may use only during program involvement)	(52)
9c.	What is the source of this housing (i.e., who is/was the landlord?) (check only one)  1. Commercial landlord, renting on an open housing market (include apartments rented with Section 8 vouchers or certificates)  2. Public Housing Authority owned or contracted housing  4. Someone else, such as veteran's family or friend, who owns house or leases from landlord friend, who owns house or leases from landlord DO NOT CODE	(53) (55)

# **Supported Housing Report**

Page 2 of 3

9d.	Did/does the veteran benefit from any subsidy which helps pay rent on this place or lowers the rent? (Do not include cash assistance, such as public assistance, which may be used for other purposes.)	□ 0= No □ 1=Yes	(56)
9e.	What is the source of the subsidy? <b>(check only one)</b> 0. None  1. Section 8 rental voucher of certificate  2. Section 8 rental voucher of certificate  3. Project-based subsidized  4. State rental subsidy	ed housing	(57)
	☐ 2. PHA-owned or contracted housing ☐ 5. Other (specify	DO NOT CODE	(59)
